Semiconductor Advanced Packaging John H. Lau, 2021-05-17 The book focuses on the design materials process fabrication and reliability of advanced semiconductor packaging components and systems Both principles and engineering practice have been addressed with more weight placed on engineering practice This is achieved by providing in depth study on a number of major topics such as system in package fan in wafer panel level chip scale packages fan out wafer panel level packaging 2D 2 1D 2 3D 2 5D and 3D IC integration chiplets packaging chip to wafer bonding wafer to wafer bonding hybrid bonding and dielectric materials for high speed and frequency The book can benefit researchers engineers and graduate students in fields of electrical engineering mechanical engineering materials sciences and industry engineering etc

Area Array Interconnection Handbook Karl J. Puttlitz, Paul A. Totta, 2012-12-06 Microelectronic packaging has been recognized as an important enabler for the solid state revolution in electronics which we have witnessed in the last third of the twentieth century Packaging has provided the necessary external wiring and interconnection capability for transistors and integrated circuits while they have gone through their own spectacular revolution from discrete device to gigascale integration At IBM we are proud to have created the initial simple concept of flip chip with solder bump connections at a time when a better way was needed to boost the reliability and improve the manufacturability of semiconductors The basic design which was chosen for SLT Solid Logic Technology in the 1960s was easily extended to integrated circuits in the 70s and VLSI in the 80s and 90s Three I O bumps have grown to 3000 with even more anticipated for the future The package families have evolved from thick film SLT to thin film metallized ceramic to co fired multi layer ceramic A later family or ceramics with matching expansivity to sili con and copper internal wiring was developed as a predecessor of the chip interconnection revolution in copper multilevel submicron wiring Powerful server packages have been developed in which the combined chip and package copper wiring exceeds a kilometer All of this was achieved with the constant objective of minimizing circuit delays through short efficient interconnects

Chiplet Design and Heterogeneous Integration Packaging John H. Lau, 2023-03-27 The book focuses on the design materials process fabrication and reliability of chiplet design and heterogeneous integration packaging Both principles and engineering practice have been addressed with more weight placed on engineering practice This is achieved by providing in depth study on a number of major topics such as chip partitioning chip splitting multiple system and heterogeneous integration with TSV
