Dynamics Of Thought:

The Dynamics of Thought Peter Gardenfors, 2005-11-10 This book is a selection from the articles that I have written over a period of more than twenty years. Since the focus of my research interests has shifted several times during this period, it would be difficult to identify a common theme for all the papers in the volume. Following the Swedish tradition, I therefore present this as a small board of philosophical and cognitive issues that I have worked on. To create some order, I have organized the sixteen papers into five general sections: 1. Decision theory, 2. belief revision and nonmonotonic logic, 3. induction, 4. semantics and pragmatics, and 5. cognition and evolution. Having said this, I still think that there is a common theme to my work over the years: The dynamics of thought. My academic interests have all the time dealt with aspects of how different kinds of knowledge should be represented and, in particular, how changes in knowledge will affect thinking. Hence the title of the book.

From Brain Dynamics to the Mind Georg Northoff, 2024-04-01 From Brain Dynamics to the Mind Spatiotemporal Neuroscience explores how the self and consciousness is related to neural events. Sections in the book cover existing models used to describe the mind-brain problem, recent research on brain mechanisms and processes, and what they tell us about the self, consciousness, and psychiatric disorders. The book presents a spatiotemporal approach to understanding the brain and the implications for artificial intelligence, novel therapies for psychiatric disorders, and for ethical, societal, and philosophical issues. Pulling concepts from neuroscience, psychology, and philosophy, the book presents a modern and complete look at what we know, what we can surmise, and what we may never know about the distinction between brain and mind. Reviews models of understanding the mind-brain problem. Identifies neural processes involved in consciousness, sense of self, and brain function. Includes concepts and research from neuroscience, psychology, cognitive science, and philosophy. Discusses implications for AI, novel therapies for psychiatric disorders, and issues of ethics. Suggests experimental designs and data analyses for future research on the mind-brain issue.

Mind, 1901 The Oxford Handbook of Spontaneous Thought Kieran C. R. Fox, Kalina Christoff, 2018 Where do spontaneous thoughts come from? It may be surprising that the seemingly straightforward answers from the mind or from the brain are in fact an incredibly recent understanding of the origins of spontaneous thought. For nearly all of human history, our thoughts, especially the most sudden, insightful, and important, were almost universally ascribed to divine or other external sources. Only in the past few centuries have we truly taken responsibility for their own mental content and finally localized thought to the central nervous system, laying the foundations for a protoscience of spontaneous thought. But enormous questions still loom: what exactly is spontaneous thought? Why does our brain engage in spontaneous forms of thinking, and when is this most likely to occur? And perhaps the question most interesting and accessible from a scientific perspective: how does the brain generate and evaluate its own spontaneous creations? Spontaneous thought includes our daytime fantasies and mind-wandering, the flashes of insight and inspiration familiar to the artist, scientist, and inventor, and the nighttime visions we call dreams. This Handbook brings together views

from neuroscience psychology philosophy phenomenology history education contemplative traditions and clinical practice to begin to address the ubiquitous but poorly understood mental phenomena that we collectively call spontaneous thought In studying such an abstruse and seemingly impractical subject we should remember that our capacity for spontaneity originality and creativity defines us as a species and as individuals Spontaneous forms of thought enable us to transcend not only the here and now of perceptual experience but also the bonds of our deliberately controlled and goal directed cognition they allow the space for us to be other than who we are and for our minds to think beyond the limitations of our current viewpoints and beliefs
