M. Gerris, 2001 Parenting refers to the way in which parents construct interpret and build up relationships child rearing practices and child rearing environs by daily interactions with children and adolescents Patterns of interactive influences are built up and changed in dimensions of behaviors relationships social systems cultural and economic conditions and in dimensions of micro and macro time sequences The

purpose of this book is to bring together the key sources and dimensions of parenting by treating parenting as a field of interest in its own right. BOOK JACKET Title Summary field provided by Blackwell North America Inc All Rights Reserved

Parents And The Dynamics Of Child Rearing George W Holden,2019-07-11 Research into parent child relationships is a diverse field of inquiry attracting investigators from a variety of disciplines and subdisciplines This book integrates and synthesizes the literature by focusing on issues concerning the parent The text is organized around four key questions What determines parental behavior What are the effects of parenting on children What makes some parents more effective than others Why do some parents maltreat their children George Holden adopts a dynamic rather than a static perspective on parenting This dynamic approach reflects parents capacity to modify their behavior as they respond to changes in their children and in their own lives Throughout the text historical antecedents as well as methodological and theoretical issues are highlighted Although the book is designed for advanced courses focusing on the parent child relationship it also provides a good overview for those interested in current research concerning parenting

The Dynamics of Powerful Parenting Raymond Messer,2005 The Dynamics of Powerful Parenting is a book about power the power held by a parent to shape the development of a child and the power of a child to either accept or reject those efforts Often when things are not working well for parents with their children they will continue doing the same things yet with ever more vigor Usually the result will be more of the same only worse A secret to understanding the dynamics of many human behaviors lies in the paradox of the Chinese Finger Puzzle aka Chinese Handcuff The Chinese finger puzzle is a tube woven from bamboo shoots that is several inches long and about the diameter of a person s fingers true to its nature the tube will narrow as its ends are pulled Thus when the tube is slipped over the ends of fingers or thumbs on opposing hands the subject s efforts to pull his or her fingers apart are met with increasing resistance from the device So it is with much of being human The thing that people wish to avoid most is the very thing that results from their efforts to do so Dynamics is a book written with this paradox in mind It is a book of insights about parenting that turns upside down many of the things that are currently held dear in traditional parenting efforts It is a book that downplays the use of punishment but never overlooks the need for discipline and responsibility Dynamics encourages parents to think about what they are doing how they are doing it and what are they are experiencing as a result then provides useful tools for changing undesired outcomes It is a book that can produce positive results that will benefit generations yet unborn

Parenting George W. Holden,2014-10-10 Written from a psychological perspective while integrating cross disciplinary viewpoints this fully updated Second Edition takes a parent centered approach to exploring topics such as the reasons behind parental behavior the effect parents and children have on one another and social policy s ability to help families Including the latest statistics on family functioning and with coverage of contemporary issues George Holden s Parenting conveys the process of parenting in all its complexities

Children's Influence on Family Dynamics Ann C. Crouter, Alan Booth, 2003-04-02 This volume addresses how children's personal qualities make their mark on families in ways that may in turn influence children's subsequent development **The Dynamics of the Parent/Child Relationship** Calvert Moore, 2016-05-12 The need to examine the dynamics of the parent child relationship is nothing new We may be in a new generation but the various dynamics that make up the parent child relationship is the same as they have always been The parent and the child are each individuals and sometimes navigating through the parent child relationship can be rather rocky My name is Dr Calvert Moore and I have had a chance to witness

many different types of parent child relationships and the lasting effects it can have on one's life. The views and subjects discussed in this book are solely my own. By having had a chance to work with children and their parents, it became clear to me that there is sometimes a disconnect that causes the child and/or the parent to experience unnecessary hardships that could have possibly been avoided if the parent-child relationship was given the attention that it needed. Just as any other relationship, the parent-child relationship requires work and attention. I wrote this book so not only the parent and the child can learn about one another but they can also take time to reflect on themselves. While reading this book, you may find that some topics do not pertain to both the parent and the child, but please continue to read on as you will obtain clarity as you near the conclusion. Remember, everyone's situation is different, and some of the information may not always apply directly to you.

Leadership Parenting Sanjay Kalla, Authors Tree Publishing, 2024-09-30

Parents play a multifaceted role in shaping their children's lives, specifically focusing on the tension between fostering independence and recognizing individual potential. While parents are undoubtedly crucial figures in a child's development, acting as primary educators and guides, their influence can sometimes inadvertently neglect the child's unique needs and aspirations. This potential conflict arises within the social context. Parents, often drawing upon societal expectations and their own experiences, navigate a path toward independence for their children. While providing a foundation, this established structure may only partially account for the diverse spectrum of individual strengths and weaknesses exemplified by frameworks like Howard Gardner's theory of multiple intelligences. Furthermore, the current parenting model prioritizes independence over fostering a long-term supportive relationship with the child. This oversimplification overlooks the complexity of healthy parent-child relationships, which can encompass individual autonomy and a strong sense of connection. It is important to acknowledge that the limitations of traditional parenting approaches are not solely the result of individual shortcomings. Unlike most professions, parenting lacks formal instruction, relying largely on on-the-job learning and adapting to diverse situations. This reality necessitates further exploration of alternative approaches and support systems that can empower parents to navigate this complex and crucial role while recognizing each child's unique potential. It is critical to understand and emphasize the undeniable importance of parents in their children's lives while urging a critical examination of current practices. By recognizing the potential tension between established structures and individual needs, we can foster a dialogue that leads to a more nuanced and effective approach to raising future generations. While parents undoubtedly guide us from dependence to independence, equipping us for life's journey, this traditional approach often overlooks the unique spark within each child. This book challenges that notion. Leadership Parenting champions a new perspective. Here, we move beyond simply providing for our children's needs. We explore how to nurture their strengths, aspirations, and intellectual, emotional, and social potential. Forget the one-size-fits-all model. This is a call to action to embrace the constant learning inherent in parenting. You'll discover tools and strategies to navigate the complexities of modern parenthood, fostering independence and a supportive

long term relationship with your child

Understanding how Family-level Dynamics Affect Children's Development : Studies of Two-parent Families James P. McHale, Philip A. Cowan, 1996

Parenting George W Holden, Amanda W Harrist, 2024-08-20 George Holden and Amanda Harrist embrace the idea that parenting is a dynamic process children affect parents just as much as parents affect children A multi level ecological approach to parenting and childrearing allows a full range of parenting styles covering topics from co parenting evolutionary views human behavioral genetics to religious influences and addressing challenges to be encountered across parenting courses such as family violence behavior problems and the role of pathology in the family The completely updated Parenting A Dynamic Process Fourth Edition presents research in a way that is accessible and interesting but also accurate current and intellectually rich Although written from a psychological perspective views and applications from other disciplines including sociology criminology anthropology and pediatrics are also discussed where appropriate The text discusses contemporary issues such as fertility problems daycare marital conflict whether or not to use physical punishment divorce remarriage and step parents LGBTQ parents the effects of poverty risks and benefits of

media use among children and family violence Additionally Holden and Harrist include selected studies from developing and non Western countries as well as recent statistics on such topics as US world birthrate birth problems adolescent pregnancy child injury divorce and remarriage child maltreatment and certain social policy issues *Your Child Doesn't Listen to You: You Live in Dependency and Symbiosis* Edenilson Brandl, In a world where parental involvement is often seen as a reflection of love and care we seldom pause to question the consequences of over involvement or what we commonly term dependency within parent child relationships While it is natural for parents to protect guide and nurture their children an excessive need for control can hinder a child s emotional growth autonomy and ability to navigate the complexities of life independently This book delves into the psychological and emotional impact of overprotection examining how the dynamic between dependency and independence shapes a child s development The aim of this work is not to vilify parental care but to bring awareness to the delicate balance necessary for fostering a healthy relationship one that allows children to grow into emotionally resilient and self sufficient individuals Through a deep exploration of family dynamics symbiosis and the natural process of emotional development this book seeks to highlight the hidden consequences of well meaning actions that may inadvertently impede a child s ability to achieve true autonomy Drawing on research in psychology case studies and real life examples this book is designed for parents caregivers educators and anyone interested in understanding the intricate ways parental control influences personal growth It encourages a shift in perspective seeing love not as control but as the ability to step back and allow children to experience life on their own terms May this book inspire thoughtful reflection on how we as a society can foster healthier more independent futures for our children by rethinking our notions of protection care and the path to emotional freedom **The Dynamic of Parent Relationships and Children's Dropout Rates** Mami Fujii,2004
