*The Cannibal Within* Lewis F. Petrinovich, *The Cannibal Within* offers an evolutionary account of the propensity of human beings in extreme circumstances to eat other human beings despite the strong Western taboo against such practices What sets this volume apart from the large body of literature on cannibalism both popular and anthropological is the underlying premise cannibalism as an alternative to starvation is tacitly condoned by the same biological morality that would condemn cannibalism of other sorts in non threatening situations Deep as the taboos may be the survival instinct runs even deeper The title of the book reflects the author s belief that cannibalism is not a pathology that erupts in psychotic individuals but is a universal adaptive strategy that is evolutionarily sound The cannibal is within all of us and cannibals are within all cultures should the circumstances demand cannibalism s appearance and usage Petrinovich s work is rich in historical detail and rises to a level of theoretical sophistication in addressing a subject too often dealt with in sensationalist terms The major instances in which survival cannibalism has occurred convinced the author that there is a consistent pattern and a uniform regularity of order in which different kinds of individuals are consumed In considering who eats whom when and under what circumstances this regularity appears and it is consistent with what would be expected on the basis of evolutionary or Darwinian theory In short he concludes that starvation cannibalism is not a manifestation of the chaotic psychotic behavior of individuals who are driven to madness but reveals underlying characteristics of evolved human beings Lewis Petrinovich is professor emeritus in the Department of Psychology of the University of California Riverside and is currently a resident of Berkeley California

**Policy Uncertainty and Risk** Tomas Hellström,Merle Jacob,2011-06-28 **Policy Uncertainty and Risk** presents a contribution to risk analysis and risk management in public policy and management at large Special emphasis is put on the utilization of scientific knowledge by decision makers in instances where knowledge in both spheres of science and administration is highly uncertain and contested The book therefore contributes a model of science practitioner interaction in a policy area of strong current relevance The perspective is a realist constructivist one which means that risk and policy are taken to be socially predicated insofar as we can choose and change the way we define and interact with its practices It is realist insofar

as we continually use such constructions to re define and re structure the world we live in Although essentially theory driven and conceptually oriented the authors develop their argument for a new interpretation of policy relevant science through a number of pressing case studies These studies include the recent BSE CJD crises in the UK the introduction of Marine Protected Areas in Sweden and the current practices surrounding risk management in corporate bodies Drawing on empirical cases and theoretical explication the book provides a number of suggestions as to how risk analysis and risk management may be more properly conceived of both from a practitioner as well as from an academic point of view **On**
