*Molecular Genetics of Drug Resistance* John D. Hayes,C.Roland Wolf,2024-11-15 Drug resistance is a growing problem in today s society Successful drugs are constantly being developed but there is always the risk that a small percent of the drug s target will be immune These survivors can then lead to a new population resistant to the action of this drug New drugs are continuously under development to combat this problem but these can in turn lead to new resistant populations This problem is universal whether the target is to destroy a deadly virus or an insect which is ravaging crop production Development of new drugs is difficult and time consuming so it is of crucial importance that we understand the processes behind drug resistance
