DiClemente,Sten H. Vermund,2006-04-11 Globally action to prevent HIV spread is inadequate Over 16 000 new infections occur every day Yet we are not helpless in the face of disaster as shown by the rich prevention experience analyzed in this valuable new compendium Best practice exists a set of tried and tested ways of slowing the spread of HIV of persuading and enabling people to protect themselves and others from the virus Individually features of best practice can be found almost everywhere The tragedy on a world scale is that prevention is spotty not comprehensive the measures are not being applied on anywhere near the scale needed or with the right focus or synergy The national response may concentrate solely on sex workers for example Elsewhere efforts may go into school education for the young but ignore the risks and vulnerability of men who have sex with men Action may be patchy geographically AIDS prevention may not benefit from adequate commitment from all parts and sectors of society compromising the sustainability of the response In some countries matters are still worse there is still hardly any action at all against AIDS and scarcely any effort to make HIV visible It is no wonder that the epidemic is still emerging and in some places is altogether out of control UK Drugs Unlimited H.
