Dual Resonance Models And Superstrings:

Dual Resonance Models and Superstrings Paul H. Frampton,1986 This is an excellent book on dual model and string theories This updated issue of the author s book Dual Resonance Models has new chapters on string theories added to it This new volume therefore provides much background on the non symmetrical aspects as well as modern development in the theory of strong interactions This is a must for high energy physicists **Dual Resonance Models** Paul H.

Frampton,1974-01-01 **Superstrings: The First 15 Years Of Superstring Theory (Reprints + Commentary - In 2 Volumes)** John H Schwarz,1985-09-01 The discovery by Green and Schwarz in 1984 that ten dimensional superstring theory is anomaly free and finite only if the Yang Mills gauge group is SO_{32} or $E_8 \times E_8$ has made the phenomenological possibilities of superstrings evident This has resulted in a sudden surge of interest in superstrings unification Since this fast developing field is new to almost all theoretical physicist this collection of basic pre 1985 references should be very valuable This two volumes contain over 1000 pages of reprints plus some introductory comments by J Schwarz **Superstring Theory:**

Volume 2, Loop Amplitudes, Anomalies and Phenomenology Michael B. Green,John H. Schwarz,Edward Witten,1988-07-29 A two volume systematic exposition of superstring theory and its applications which presents many of the new mathematical tools that theoretical physicists are likely to need in coming years This volume contains an introduction to superstrings *Superstring Theory* Michael B. Green,John H. Schwarz,Edward Witten,2012-07-26 The twenty fifth anniversary edition featuring a new Preface invaluable for graduate students and researchers in high energy physics and astrophysics **Superstring Theory: Volume 1, Introduction** Michael B. Green,John H. Schwarz,Edward

Witten,2012-07-26 Twenty five years ago Michael Green John Schwarz and Edward Witten wrote two volumes on string theory Published during a period of rapid progress in this subject these volumes were highly influential for a generation of students and researchers Despite the immense progress that has been made in the field since then the systematic exposition of the foundations of superstring theory presented in these volumes is just as relevant today as when first published A self contained introduction to superstrings Volume 1 begins with an elementary treatment of the bosonic string before describing the incorporation of additional degrees of freedom fermionic degrees of freedom leading to supersymmetry and internal quantum numbers leading to gauge interactions A detailed discussion of the evaluation of tree approximation scattering amplitudes is also given Featuring a new preface setting the work in context in light of recent advances this book is invaluable for graduate students and researchers in general relativity and elementary particle theory **Contributions to**

Theory in Physics J. F. Cornwell, 1984 Recent developments particularly in high energy physics have projected group theory and symmetry consideration into a central position in theoretical physics These developments have taken physicists increasingly deeper into the fascinating world of pure mathematics This work presents important mathematical developments of the last fifteen years in a form that is easy to comprehend and appreciate

The Superworld II Antonino Zichichi, 1990-09 During August 1987 a group of 76 physicists from 51 laboratories in 22 countries met in Erice for the 25th Course of the International School of Subnuclear Physics The countries represented were Austria Bulgaria Canada Chile China Colombia Czechoslovakia France Federal Republic of Germany Greece Hungary India Italy Lebanon The Netherlands Poland Portugal Spain Sweden Switzerland United Kingdom and the United States of America The School was sponsored by the European Physical Society EPS the Italian Ministry of Public Education MPI the Italian Ministry of Scientific and Technological Research MRSI the Sicilian Regional Government ERS and the Weizmann Institute of Science This is the 25th anniversary of the School and for the second time the programme has been mainly devoted to the Superworld Needless to say that the Superworld appears to be at present very far from the experimental axis Nevertheless the Superworld is a fascinating field of modern physics we ought to know what boils in the heads of our theoretical colleagues keeping in mind that the source of basic truth is and will remain experimental physics Relevant news in experimental physics was scarce in the past year and the most interesting results have been reported The future has also been presented with LEP Gran Sasso HERA projects to become operative by 1000 and ELOISATRON as the driving force for Europe to keep a central role in Subnuclear Physics
