Compact Closed 2-Categories Nick Gurski, Juan Orendain, David Yetter, 2025-09-01 While the Cobordism Hypothesis provides a translation between topological and categorical structures the subject of fusion categories arising from representations of finite groups has shown the need for a robust theory of duality in monoidal 2 categories This book intertwines 3 dimensional category theory with enriched and symmetric monoidal 2 categories to present a comprehensive foundation for duals in dimension two This framework is presented using wire diagrams a typographical tool that combines the geometric appeal of ordinary string diagrams with the clarity of standard commutative diagrams in category theory Chapters on enriched 2 categories closed 2 categories and compact closed 2 categories build the theory from the ground up and in full detail Shorter appendices on technical topics from higher category theory such as icons strictification theorems and computads provide readers with concise explanations of key results as well as references for researchers interested in more depth The book concludes with a chapter of examples from algebra and topology including a detailed construction for the example of cobordisms *Pontryagin Duality and the Structure of Locally Compact Abelian Groups* Sidney A. Morris, 2014-05-14 These lecture notes begin with an introduction to topological groups and proceed to a proof of the important Pontryagin van Kampen duality theorem and a detailed exposition of the structure of locally compact abelian groups Measure theory and Banach algebra are entirely avoided and only a small amount of group theory and topology is required dealing with the subject in an elementary fashion With about a hundred exercises for the student it is a suitable text for first year graduate courses **Duality and Supersymmetric Theories** David I. Olive, Peter C. West, 1999-07-08 This is the first systematic introduction to electromagnetic duality and its generalisations The authors are the leading figures in this exciting new area of mathematical physics and their lectures have been organised not only to link with each other but also to describe the fundamental ideas the latest developments and some earlier work whose significance has only recently become apparent This will be essential reading for all those working in mathematical physics *Duality for Automorphisms on a Compact C* -dynamical System* David E. Evans, Akitaka Kashimoto, 1986 **'Integrated Semigroups' and Duality** H. R.
