Bootstrap Literature Margaret M. Wendell, 1982      **Bootstrap Methods** Michael R. Chernick, 2011-09-23 A practical and accessible introduction to the bootstrap method newly revised and updated Over the past decade the application of bootstrap methods to new areas of study has expanded resulting in theoretical and applied advances across various fields Bootstrap Methods Second Edition is a highly approachable guide to the multidisciplinary real world uses of bootstrapping and is ideal for readers who have a professional interest in its methods but are without an advanced background in mathematics Updated to reflect current techniques and the most up to date work on the topic the Second Edition features The addition of a second extended bibliography devoted solely to publications from 1999 2007 which is a valuable collection of references on the latest research in the field A discussion of the new areas of applicability for bootstrap methods including use in the pharmaceutical industry for estimating individual and population bioequivalence in clinical trials A revised chapter on when and why bootstrap fails and remedies for overcoming these drawbacks Added coverage on regression censored data applications P value adjustment ratio estimators and missing data New examples and illustrations as well as extensive historical notes at the end of each chapter With a strong focus on application detailed explanations of methodology and complete coverage of modern developments in the field Bootstrap Methods Second Edition is an indispensable reference for applied statisticians engineers scientists clinicians and other practitioners who regularly use statistical methods in research It is also suitable as a supplementary text for courses in statistics and resampling methods at the upper undergraduate and graduate levels      *An Introduction to the Bootstrap* Bradley Efron, R.J. Tibshirani, 1994-05-15 An Introduction to the Bootstrap arms scientists and engineers as well as statisticians with the computational techniques they need to analyze and understand complicated data sets The bootstrap is a computer based method of statistical inference that answers statistical questions without formulas and gives a direct appreciation of variance bias coverage and other probabilistic phenomena This book presents an overview of the bootstrap and related methods for assessing statistical accuracy concentrating on the ideas rather than their mathematical justification Not just for beginners the presentation starts off slowly but builds in both scope and depth to ideas that are quite sophisticated      The Jackknife and Bootstrap Jun Shao, Dongsheng Tu, 2012-12-06 The jackknife and bootstrap are the most popular data resampling methods used in statistical analysis The resampling methods replace theoretical derivations required in applying traditional methods such as substitution and linearization in statistical analysis by repeatedly resampling the original data and making inferences from the resamples Because of the availability of inexpensive and fast computing these computer intensive methods have caught on very rapidly in recent years and are particularly appreciated by applied statisticians The primary aims of this book are 1 to provide a systematic introduction to the theory of the jackknife the bootstrap and other resampling methods developed in the last twenty years 2 to provide a guide for applied statisticians practitioners often use or misuse the resampling methods in situations where no theoretical

confirmation has been made and 3 to stimulate the use of the jackknife and bootstrap and further developments of the resampling methods The theoretical properties of the jackknife and bootstrap methods are studied in this book in an asymptotic framework Theorems are illustrated by examples Finite sample properties of the jackknife and bootstrap are mostly investigated by examples and or empirical simulation studies In addition to the theory for the jackknife and bootstrap methods in problems with independent and identically distributed Li d data we try to cover as much as we can the applications of the jackknife and bootstrap in various complicated non Li d data problems
