

Bornological, coarse and uniform groups

Igor Protasov

Abstract. We survey and analyze different ways in which bornologies, coarse structures and uniformities on a group agree with the group operations.

MSC: 20F69, 22A05, 54E35, 54H35

Keywords: bornology, coarse structure, uniformity, Stone-Ćech compactification.

1. BORNOLOGICAL GROUPS

1.1. Bornological spaces. A family \mathcal{I} of subsets of a set X is called an *ideal* (in the Boolean algebra \mathcal{P}_X of all subsets of X) if \mathcal{I} is closed under formation of finite unions and subsets. If $\bigcup \mathcal{I} = X$ then \mathcal{I} is called a *bornology*, so a bornology is an ideal containing the ideal \mathfrak{F}_X of all finite subsets.

A bornology \mathcal{B} on X is called *tall* if any infinite subset Y of X contains an infinite subset Z such that $Z \in \mathcal{B}$.

A bornology \mathcal{B} on X is called *antitall* if, for any $Y \subseteq X$, $Y \notin \mathcal{B}$, there exists $Z \subseteq Y$ such that $Z' \notin \mathcal{B}$ for each infinite subset Z' of Z .

By [1, Proposition 1], every bornology is the meet of some tall and antitall bornologies.

A family $\mathfrak{B} \subseteq \mathcal{B}$ is called a *base* of \mathcal{B} if, for any $A \in \mathcal{B}$, there exists $B \in \mathfrak{B}$ such that $A \subseteq B$. Every bornology with a countable base is antitall. In particular, a bornology of all bounded subsets of a metric space is antitall. We note also that, for every bornology \mathcal{B} on X with a countable base, there exists a metric d on X such that \mathcal{B} is a bornology of all bounded subsets of (X, d) .

A set X endowed with a bornology \mathcal{B} is called a *bornological space*, and is denoted by (X, \mathcal{B}) . Each subset $Y \in \mathcal{B}$ is called *bounded*. If $\mathcal{B} = \mathcal{P}_X$ then (X, \mathcal{B}) is *bounded*.

Let (X, \mathcal{B}) be a bornological space. Every subset $Y \subseteq X$ defines the bornological subspace (Y, \mathcal{B}_Y) , $\mathcal{B}_Y = \{Y \cap A : A \in \mathcal{B}\}$.

The product of a family of bornological spaces is the Cartesian product of its supports endowed with the Cartesian product of its bornologies.

A mapping $f : (X, \mathcal{B}) \rightarrow (X', \mathcal{B}')$ is called *bornologous* if $f(A) \in \mathcal{B}'$ for each $A \in \mathcal{B}$.

A *variety* is a class of bornological spaces closed under formation of subspaces, products and bornological images.

Bornologies and Functional Analysis, 1977-01-01 Bornologies and Functional Analysis **Advanced Topics in Mathematical Analysis** Michael Ruzhansky, Hemen Dutta, 2019-01-08 Advanced Topics in Mathematical Analysis is aimed at researchers graduate students and educators with an interest in mathematical analysis and in mathematics more generally. The book aims to present theory methods and applications of the selected topics that have significant useful relevance to contemporary research. Local and Analytic Cyclic Homology Ralf Meyer, 2007 Periodic cyclic homology is a homology theory for non commutative algebras that plays a similar role in non commutative geometry as de Rham cohomology for smooth manifolds. While it produces good results for algebras of smooth or polynomial functions it fails for bigger algebras such as most Banach algebras or C algebras. Analytic and local cyclic homology are variants of periodic cyclic homology that work better for such algebras. In this book the author develops and compares these theories emphasizing their homological properties. This includes the excision theorem invariance under passage to certain dense subalgebras a Universal Coefficient Theorem that relates them to K theory and the Chern Connes character for K theory and K homology. The cyclic homology theories studied in this text require a good deal of functional analysis in bornological vector spaces which is supplied in the first chapters. The focal points here are the relationship with inductive systems and the functional calculus in non commutative bornological algebras. Some chapters are more elementary and independent of the rest of the book and will be of interest to researchers and students working on functional analysis and its applications. Topological Vector Spaces and Their Applications V.I. Bogachev, O.G. Smolyanov, 2017-05-16 This book gives a compact exposition of the fundamentals of the theory of locally convex topological vector spaces. Furthermore it contains a survey of the most important results of a more subtle nature which cannot be regarded as basic but knowledge which is useful for understanding applications. Finally the book explores some of such applications connected with differential calculus and measure theory in infinite dimensional spaces. These applications are a central aspect of the book which is why it is different from the wide range of existing texts on topological vector spaces. Overall this book develops differential and integral calculus on infinite dimensional locally convex spaces by using methods and techniques of the theory of locally convex spaces. The target readership includes mathematicians and physicists whose research is related to infinite dimensional analysis. *Mathematical Reviews*, 2007

Topological Algebras and Applications Anastasios Mallios, Marina Haralampidou, 2007 The Fifth International Conference on Topological Algebras and Applications was held in Athens Greece from June 27th to July 1st of 2005. The main topic of the Conference was general theory of topological algebras and its various applications with emphasis on the non normed case. In addition to the study of the internal structure of non normed and even non locally convex topological algebras there are applications to other branches of mathematics such as differential geometry of smooth manifolds and mathematical physics such as quantum relativity and quantum cosmology. Operator theory of unbounded operators and related non normed

topological algebras are intensively studied here Other topics presented in this volume are topological homological algebra topological algebraic geometry sheaf theory and K theory Methods of Functional Analysis and Topology ,2007

Concrete Subspaces and Quotient Spaces of Locally Convex Spaces and Completing Sequences Süleyman Önal,T. Terzioğlu,1992 **Spectral Theory** Wiesław Żelazko,1982 *Travaux de Mathématiques* ,1989 *Linear Spaces and Differentiation Theory* Alfred Frölicher,Andreas Kriegl,1988-08-18 This book presents a new basis for differential calculus Classical differentiation in linear spaces of arbitrary dimension uses Banach spaces but most function spaces are not Banach spaces Any attempts to develop a theory of differentiation covering non normable linear spaces have always involved arbitrary conditions This book bases the theory of differentiability of linear spaces on the fundamental idea of reducing the differentiability of general maps to that of functions on the real numbers And the property continuously differentiable is replaced by that of Lipschitz differentiable The result is a more natural theory of conceptual simplicity that leads to the the same categories of linear spaces but in a more general setting **Strong Maximum Principle for a Quasi-linear Equation with Applications** Seppo Granlund,1978 **Topological Vector Spaces and Distributions** John Horváth,1966 *Manuscripta Mathematica* ,1986 **Hiroshima Mathematical Journal** ,2009 **Revue Roumaine de Mathématiques Pures Et Appliquées** ,1993 *Topological Vector Spaces I* Gottfried Köthe,1983 It is the author s aim to give a systematic account of the most im portant ideas methods and results of the theory of topological vector spaces After a rapid development during the last 15 years this theory has now achieved a form which makes such an account seem both possible and desirable This present first volume begins with the fundamental ideas of general topology These are of crucial importance for the theory that follows and so it seems necessary to give a concise account giving complete proofs This also has the advantage that the only preliminary knowledge required for reading this book is of classical analysis and set theory In the second chapter infinite dimensional linear algebra is considered in comparative detail As a result the concept of dual pair and linear topologies on vector spaces over arbitrary fields are intro duced in a natural way It appears to the author to be of interest to follow the theory of these linearly topologised spaces quite far since this theory can be developed in a way which closely resembles the theory of locally convex spaces It should however be stressed that this part of chapter two is not needed for the comprehension of the later chapters Chapter three is concerned with real and complex topological vector spaces The classical results of Banach s theory are given here as are fundamental results about convex sets in infinite dimensional spaces **Topological Vector Spaces** John Horváth,1967 *Functional Analysis and Its Applications* H. Hogbe-Nlend,1988 *CMUC* ,1998
