Boronic Acids:

Boronic Acids Dennis G. Hall, 2012-09-05 Following the huge success of the first edition which has become THE reference source for everyone working in the field this long awaited completely updated edition features almost 50% new content The world renowned chemist Prof Dennis Hall is joined by a select group of top authors to cover all modern aspects of boronic acid derivatives in one comprehensive handbook The experimental procedures described make for extremely useful reading From the reviews of the first edition deserves to be on the bookshelf of all synthetic chemists whether in discovery or process chemistry

Boronic Acids Dennis G. Hall, 2006-05-12 For the first time the whole field of organoboronic acids is presented in one comprehensive handbook Professor Dennis Hall a rising star within the community covers all aspects of this important substance class including applications in chemistry biology and medicine Starting with an introduction to the structure properties and preparation of boronic acid derivatives together with an overview of their reactions and applications the book goes on to look at metal catalyzed borylation of alkanes and arenes coupling reactions and rhodium catalyzed additions of boronic acids to alkenes and carbonyl compounds There follows chapters on copper promoted C O and C N cross coupling of boronic acids recent applications in organic synthesis as well as alpha haloalkylboronic esters in asymmetric synthesis Later sections deal with cycloadditions organoboronic acids oxazaborolidines as asymmetric inducers and boronic acid based receptors and sensors The whole is rounded off with experimental procedures making this invaluable reading for organic catalytic and medicinal chemists as well as those working in organometallics

Boronic Acids in Saccharide Recognition Tony D. James, Marcus D. Phillips, Seiji Shinkai, 2006 The desire to quantify the presence of analytes within diverse physiological environmental and industrial systems has led to the development of many novel detection methods In this arena saccharide analysis has exploited the pair wise interaction between boronic acids and saccharides *Boronic Acids in Saccharide Recognition* provides a comprehensive review and critical analysis of the current developments in this field It also assesses the potential of this innovative approach outlining future lines of research and possible applications Topics include the molecular recognition of saccharides the complexation of boronic acids with saccharides fluorescent sensors and the modular construct of fluorescent sensors further sensory systems for saccharide recognition and an extensive bibliography This high level book is ideal for researchers both academic and industrial who require a comprehensive overview of the subject

Concentrations Under Physiological Conditions Jason N. Camara, 2003 Biomedical Applications and Strategies Using Boronic Acids Thomas Patrick Smith, 2016 Boronic acids have been shown to interact with biological molecules including carbohydrates and reactive oxygen species ROS This variety of biological targets is due to the unique reactivity of boron that within a physiological pH range can adopt two electronically and structurally distinct forms that differ in Lewis acidity This type of reactivity can be exploited for the design of novel biomedical tools and strategies for biological based therapeutics The development of therapeutic proteins is generating considerable interest This interest is due to the high selectivity of proteins for a target and the high enzymatic activity a protein based therapeutic can possess There are however a number of challenges that need to be met The delivery of peptides and proteins to the site of action is notoriously difficult This challenge is due in part to the difficulty of molecules of peptidic size and complexity to reach the site of action primarily the cytosol of a cell and still maintain function Although there is considerable effort to develop better ways to facilitate uptake into the cytosol many of these strategies have serious limitations related to toxicity or physiological stability In chapter 2 I describe the development of a discreet small molecule boronic acid based delivery strategy for the delivery of native protein into the cytosol of a cell This was accomplished by appending a specialized boronic acid directly to solvent exposed lysine residues of a protein of interest via an immolative linker possessing esterase sensitivity The boronic acid benzoxaborole has enhanced affinity for the non reducing saccharides that are prevalent on the surface of a cell By increasing the number and affinity of interactions with the cell surface this strategy was shown to significantly improve cellular uptake of both green fluorescent protein GFP and a cytotoxic variant of RNase A Most importantly these boronic acid appendages are quantitatively cleaved when exposed to endosomal and cytosolic esterases releasing completely native unmodified protein Another challenge with biologic therapeutics is overcoming the potential pleiotropic nature of the particular protein or enzyme This challenge is explicit in the use of angiogenin ANG as a potential treatment of amyotrophic lateral sclerosis ALS ANG has been shown to be a powerful neuroprotectant and recovery agent in mouse models for ALS Nonetheless treatment with wild type angiogenin can also promote undesired angiogenesis and tumor growth in the systemic system In chapter 3 I highlight a specific masking strategy that silences the catalytic activity of ANG under normal physiological conditions When exposed to reactive oxygen species ROS leading to oxidative stress this mask is removed and catalytic activity is reconstituted Oxidative stress is a key component in a number of disease states including cancer cardiomyopathy inflammation diabetes and many neurodegenerative diseases In ALS the up regulation of ROS in the central nervous system CNS is primarily responsible for the motor neuron degeneration characteristic of the disease The presence of a boronic acid masking agent engenders ANG with pro drug characteristics which not only expands the potential use of this protein as a therapeutic for ALS but also offers a novel way of fine tuning enzyme activity in a controlled fashion Boronic acids have also been utilized as important functional groups in medicinal chemistry For example Velcade bortezomib is a first in class

boronic acid containing protease inhibitor and the first boronic acid drug to be approved by the FDA Another potential target is the homotetrameric protein transthyretin TTR The misfolding of TTR leads to amyloid fibril formation in the peripheral nervous system or cardiac tissue leading to several known human amyloidogenic diseases Current treatment for TTR amyloidosis requires a high risk and costly liver transplant to remove the primary source of a deleterious TTR variant Alternative strategies use small molecules to stabilize the TTR quaternary structure and thereby preventing fibril formation In chapter 4 I discuss the development and characterization of a targeted library of small molecule boronic acids that bind to the thyroxin T4 binding pockets and strongly inhibit fibril formation in both wild type and a common disease variant V30M TTR Structural data has shown that two molecules from this library bind in a covalent fashion with polar residues within the T4 binding pocket These are the first boronic acids to interact covalently with a non catalytic residue within a protein binding site and opens new avenues for the use of boronic acids in the design of small molecule therapeutics **Optical**
