### Visualization, Explanation and Reasoning Styles in Mathematics P. Mancosu,Klaus Frovin Jørgensen,S.A.

Pedersen,2006-03-30 In the 20th century philosophy of mathematics has to a great extent been dominated by views developed during the so called foundational crisis in the beginning of that century These views have primarily focused on questions pertaining to the logical structure of mathematics and questions regarding the justification and consistency of mathematics Paradigmatic in this respect is Hilbert's program which inherits from Frege and Russell the project to formalize all areas of ordinary mathematics and then adds the requirement of a proof by epistemically privileged means nitistic reasoning of the consistency of such formalized theories While interest in modified versions of the original foundational programs is still thriving in the second part of the twentieth century several philosophers and historians of mathematics have questioned whether such foundational programs could exhaust the realm of important philosophical problems to be raised about the nature of mathematics Some have done so in open confrontation and hostility to the logically based analysis of mathematics which characterized the classical foundational programs while others and many of the contributors to this book belong to this tradition have only called for an extension of the range of questions and problems that should be raised in connection with an understanding of mathematics The focus has turned thus to a consideration of what mathematicians are actually doing when they produce mathematics Questions concerning concept formation understanding heuristics changes in style of reasoning the role of analogies and diagrams etc The Brain from 25,000 Feet Mark A. Changizi,2013-06-29 In The Brain from 25 000 Feet Mark A Changizi defends a non reductionist philosophy and applies it to a variety of problems in the brain sciences Some of the key questions answered are as follows Why do we see visual illusions and why are illusions inevitable for any finite speed vision machine Why aren't brains universal learning machines and what does the riddle of induction and its solution have to do with human learning and innateness The author tackles such questions as why the brain is folded and why animals have as many limbs as they do explaining how these relate to principles of network optimality He describes how most natural language words are vague and then goes on to explain the connection to the ultimate computational limits on machines There is also a fascinating discussion of how animals accommodate greater behavioral complexity This book is a must read for researchers interested in taking a high level non mechanistic approach to answering age old fundamental questions in the brain sciences **The Withdrawal of Rights** O. Ezra,2013-06-29 Like most discussions within the tradition of rights talk this study is motivated by the desire to promote the idea that rights are moral assets that people should acquire in the course of their membership within social and political frameworks However while most participants in rights talk concentrate on the safety and protection constraints required for a successful exercising of

rights the present study inquires into the circumstances under which people's rights lose their validity The author believes that if we want to prevent the erosion of the role of rights within society and to encourage their obligatory status we should prevent their misuse or their unjustified or excessive use Those who have interests in rights and are concerned about their withdrawal or denial will find a unique and inventive way of dealing both with the use as well as the abuse of rights

Wartofsky,1969 *Axiomatic Method and Category Theory* Andrei Rodin,2013-10-14 This volume explores the many different meanings of the notion of the axiomatic method offering an insightful historical and philosophical discussion about how these notions changed over the millennia The author a well known philosopher and historian of mathematics first examines Euclid who is considered the father of the axiomatic method before moving onto Hilbert and Lawvere He then presents a deep textual analysis of each writer and describes how their ideas are different and even how their ideas progressed over time Next the book explores category theory and details how it has revolutionized the notion of the axiomatic method It considers the question of identity equality in mathematics as well as examines the received theories of mathematical structuralism In the end Rodin presents a hypothetical New Axiomatic Method which establishes closer relationships between mathematics and physics Lawvere's axiomatization of topos theory and Voevodsky's axiomatization of higher homotopy theory exemplify a new way of axiomatic theory building which goes beyond the classical Hilbert style Axiomatic Method The new notion of Axiomatic Method that emerges in categorical logic opens new possibilities for using this method in physics and other natural sciences This volume offers readers a coherent look at the past present and anticipated future of the Axiomatic Method **Boston Studies in the Philosophy of Science** Marx W.
