Bountiful Island:

Bountiful Island David Damas,1994-11-29 In Bountiful Island a major Arctic scholar turns his eye on Micronesia the small and isolated atoll of Pingelap in Micronesia lies in a moist climatic belt which encourages abundant plant life including such food plants as coconuts breadfruit and taro In this detailed examination of land tenure practices in the atoll David Damas argues that the resulting high level of subsistence has brought an expansion of the population which has put great pressures on land Under these pressures land tenure has moved from communal usage to lineage control to individual ownership and transmission rights Comparative material from neighbouring Mwaekil atoll indicates the same general succession from larger to smaller units of tenure with increasing population While control of land by kin groups is usual in the Pacific other atoll societies show examples of individual tenure which also relate to changes in population densities Subsequent depopulation and emigration have not altered the fundamentals of the land tenure system but have led to the emergence of a pattern of land stewardship This has resulted in imbalances between the holdings of resident cultivators and those of absentee landowners Comparative material from neighbouring Mwaekil atoll indicates the same general succession from larger to smaller units of tenure with increasing population While control of land by kin groups is usual in the Pacific other atoll societies show examples of individual tenure which also relate to changes in population densities Bountiful Island will be of interest to all anthropologists studying cross cultural comparisons in the theory of land tenure practices and the ethnology social anthropology and ethnohistory of Micronesia This book is also suitable for senior undergraduate and graduate courses in cultural ecology and area courses on the Pacific *H.O. Pub* United States. Hydrographic Office,1920 Sailing Directions for the North and West Coasts of Australia United States. Defense Mapping Agency. Hydrographic Center,1976

The U.S. Commercial Sea Turtle Landings W. N. Witzell,1994 The commercial landings of threatened and endangered species of marine turtles throughout U S waters have never been reported in detail The early commercial sea turtle landings were sporadically collected and were published in a series of U S Government fisheries documents Unfortunately they have never been collated and summarized into a single data base or document These are important base line fisheries data on U S threatened and endangered species of sea turtles and provide considerable insight into the sociology and economics of the turtle fishery Additionally these data also provide basic biological information such as species composition seasonality and sizes These factors are necessary for understanding the ecology of these unique reptiles and enable resource managers to formulate sound management and conservation strategies as mandated by the Endangered Species Act of 1973 and subsequent amendments In this report I summarize the commercial U S sea turtle landings as reported by the U S Fisheries Commission Bureau of Commercial Fisheries and National Marine Fisheries Service for the continental U S Puerto Rico and Hawaii Introduction **Australia Pilot: North, northwest and west coasts between the western approach to Torres Strait and Cape Leeuwin** United States.
