

CHICKEN POX TO SHINGLES

Shingles, *herpes zoster*, is a skin rash caused by a virus called *varicella zoster*, the same virus that causes chicken pox.

WHAT HAPPENS INSIDE THE BODY ...

Shingles, in its initial stage, causes burning pain and sensitive skin.

1 Varicella zoster virus lives in a dormant state inside the body.

2 Weakened immune system reawakens virus.

Introduction to Virology K. Smith,2012-12-06 The study of viruses or virology as it is now called had its origin in 1892 when a Russian botanist Iwanawsky showed that sap from a tobacco plant with an infectious disease was still highly infectious after passage through a filter capable of retaining bacterial cells From such humble beginnings the study of these filter passing agents or viruses has developed into a separate science which rivals if it does not excel in importance the whole of bacteriology The importance of viruses lies not only in the diseases they cause in every type of living organism but also because of their intimate relationship with the living cell in which alone they can reproduce Their study has influenced the whole of biology by greatly increasing our knowledge of the gene genetics and molecular structure there is also the possible connexion of viruses with human cancer in view of the occurrence of many viral cancers in other animals The book attempts to give a comprehensive but necessarily superficial survey of the subject as a whole and should help senior undergraduates and postgraduate students who wish to gain some knowledge of virology Further information is available from the extensive bibliography [The Canadian Encyclopedia of Natural Medicine](#) Sherry Torkos,2012-11-27 Natural solutions for a healthy happy lifestyle As Canadians have become more health conscious than ever more and more people want alternative solutions
