Cox,Cynthia Lightfoot,2013-05-13 The issue of how the external world becomes part of the behavioral repertoire of children has been important to psychology from its very beginning preoccupying theorists from Sigmund Freud to George Herbert Mead But ever since Lev Vygotsky claimed that every function in a child s activity appears first as a process in the social realm between individuals and moves to a process that individual children can accomplish relatively independently there has been increased debate as to exactly how this process of internalization happens In contemporary developmental psychology the process of internalization has become so important that the time is ripe for a book which explicitly addresses the problems it poses Although the chapters in this book deal with age groups from preschool to adolescence and topics from mathematics to storytelling and from taking risks to making moral judgments there is one core question which unifies them all If the growing competence of a child is truly sociogenetic if it truly grows out from is supported by and is dependent upon the social where
