## **Childhood Trauma:**

**Children and Trauma** Cynthia Monahan, 1993-04-05 Childhood traumas range widely in their severity and impact. A car accident, an earthquake, or flood, being attacked by a dog, undergoing a frightening medical treatment, all are distinctly different events yet all provoke common symptoms of psychological trauma. These symptoms may include fearfulness, nightmares, and dramatic behavioral or personality changes. And parental anxiety over changes in a child can in turn complicate the healing process. **Children and Trauma** teaches parents and professionals about the effects of such ordeals on children and offers a blueprint for restoring a child's sense of safety and balance. Cynthia Monahan, a child psychologist who specializes in the treatment of psychological trauma, offers hope and reassurance for parents. She suggests straightforward ways to help kids through tough times and also describes in detail the warning signs that indicate a child needs professional help. Monahan helps adults understand psychological trauma from a child's point of view and explores the ways both parents and professionals can help children heal.

**Childhood Trauma in Mental Disorders** Gianfranco Spalletta, Delfina Janiri, Federica Piras, Gabriele Sani, 2020-08-29 This volume presents a comprehensive overview of childhood trauma, considering the psychopathological definition and its neurobiological implications, as well as its impact on different psychiatric disorders. The focus on childhood trauma rather than that occurring in adulthood is important due to its general neuro-psychosocial and its specific biological implications, since trauma during childhood impacts directly on neurodevelopment. It has been suggested that early life stress increases vulnerability to psychiatric disorders; however, the exact mechanisms of this association are not yet completely understood. Although childhood trauma could be considered too unspecific to be an important risk factor for individual psychiatric disorders, since it seems to occur across the board, it impacts differently on different psychiatric disorders and it can modulate their clinical expression. Therefore, the assessment of early trauma needs to be included in the clinical evaluation of patients with psychiatric disorders. The volume will be an invaluable tool for psychiatrists, helping them to select suitable pharmacological, psychotherapeutic, and rehabilitative treatments.
