Relations: Concrete, Abstract, And Applied - An Introduction Herbert Toth, 2020-06-22 The book is intended as an invitation to the topic of relations on a rather general basis It fills the gap between the basic knowledge offered in countless introductory papers and books usually comprising orders and equivalences and the highly specialized monographs on mainly relation algebras many valued fuzzy relations or graphs This is done not only by presenting theoretical results but also by giving hints to some of the many interesting application areas also including their respective theoretical basics This book is a new and the first of its kind compilation of known results on binary relations It offers relational concepts in both reasonable depth and broadness and also provides insight into the vast diversity of theoretical results as well as application possibilities beyond the commonly known examples This book is unique by the spectrum of the topics it handles As indicated in its title these are

Clustering High-Dimensional Data Francesco Masulli, Alfredo Petrosino, Stefano Rovetta, 2015-11-24 This book constitutes the proceedings of the International Workshop on Clustering High Dimensional Data CHDD 2012 held in Naples Italy in May 2012 The 9 papers presented in this volume were carefully reviewed and selected from 15 submissions They deal with the general subject and issues of high dimensional data clustering present examples of techniques used to find and investigate clusters in high dimensionality and the most common approach to tackle dimensionality problems namely dimensionality reduction and its application in clustering
