to these patients *Mapping the Edges and the In-between* Nancy Nyquist Potter, 2009-06-25 Borderline Personality Disorder BPD is a diagnosis given to a significant number of people in the Western world Yet many of the core concepts symptoms that go with this diagnosis are questionable This book presents a compelling analysis of BPD arguing that it needs to be approached in a new light one that will benefit patients [Handbook of Borderline Personality Disorder in Children and Adolescents](#) Carla Sharp, Jennifer L. Tackett, 2014-04-21 Diagnosing Borderline Personality Disorder BPD in young people has long been a tough call for clinicians either for fear of stigmatizing the child or confusing the normal mood shifts of adolescence with pathology Now a recent upsurge in relevant research into early onset BPD is inspiring the field to move beyond this hesitance toward a developmentally nuanced understanding of the disorder The Handbook of Borderline Personality Disorder in Children and Adolescents reflects the broad scope and empirical strengths of current research as well as promising advances in treatment This comprehensive resource is authored by veteran and emerging names across disciplines including developmental psychopathology clinical psychology child psychiatry genetics and neuroscience in order to organize the field for an integrative future Leading edge topics range from the role of parenting in the development of BPD to trait based versus symptom based assessment approaches from the life course trajectory of BPD to the impact of the DSM 5 on diagnosis And of particular interest are the data on youth modifications of widely used adult interventions with session excerpts Key areas featured in the Handbook The history of research on BPD in childhood and adolescence Conceptualization and assessment issues Etiology and core components of BPD Developmental course and psychosocial correlates Empirically supported treatment methods Implications for future research assessment and intervention The Handbook of Borderline Personality Disorder in Children and Adolescents is a breakthrough reference for researchers and clinicians in a wide range of disciplines including child and school psychology and psychiatry social work psychotherapy and counseling nursing management and research and personality and social psychology **Borderline Personality Disorder**, 2021 In the field of psychology there are many different ways to understand or make sense of a phenomenon Researchers theorists or practitioners can approach topics via many different paradigms or schools of thought that guide their general understanding programs of research or approach to therapeutic practice Although this diversity of analysis affords some strength in terms of allowing many perspectives it also brings with it a serious problem of fragmentation With the countless theories and paradigms we lack a shared language and meta theoretical framework that assimilates and integrates the various bodies of knowledge and perspectives into a coherent frame or outline for the general psychological landscape This means that cumulative knowledge may be threatened in the mass of different opinion and perspective Henriques has developed a framework that he argues can fill an important gap in psychological knowledge In 2011 he proposed a new unified theory of psychology UT with the assertion that it could provide an organizing framework to hold and connect divergent claims resulting in a more coherent whole A central consequence of Henriques argument is that different phenomena in psychology

could be analyzed from the perspective of the UT and key insights from the paradigms and programs of empirical research could be assimilated and integrated to give a coherent holistic account. The central feature of Henriques' account is that it provides psychologists with a new frame for approaching psychology. Whereas mainstream psychology is anchored to the epistemology of science, Henriques calls for a psychology that is anchored in a conception of the mental based in a new ontology for natural science. An implication of Henriques' Unified Theory is that psychological concepts can be reinterpreted through this lens such that their underlying nature can be more clearly defined and specified. This effort has been applied to several concepts such as depression (Henriques Panizo 2018), well-being (Henriques Asselin and Kleinman 2014), dreams (McDermott 2019), and domains of character adaptation (Henriques 2017). The current project extends this effort to the concept of borderline personality disorder. More specifically, this dissertation aims to employ the Character Adaptation Systems Theory (CAST), an outgrowth of the UT, to analyze the field's understanding of Borderline Personality Disorder (BPD). CAST extends from the UT and offers a bridge between the study of personality and psychotherapy, offering a whole person approach to conceptualization. This project will then offer a conceptualization of BPD through the CAST model and evaluate its capability to organize the fragmented construct of BPD by assessing the various paradigms it integrates. After a short introduction, the history of the borderline term is explored and illustrates how the term developed into a personality disorder. This is followed by a review of major BPD paradigms including the Diagnostic and Statistical Manual of Mental Disorders (DSM), Cognitive Theory, Biosocial Theory, Interpersonal Theory, Five Factor Model, and Schema Mode Model. The case of Liam will then be explored through the various major paradigms and the application of each model can be recognized. This will be followed by a synopsis of the UT and an outline of CAST. This unifying framework is intended to organize varying theoretical perspectives and plots both their unique insights and overlapping qualities onto a broader system that illuminates how human beings develop and exist. Two key aims guide this investigation. This project can be considered a test of the hypothesis that the Unified Theory provides a metatheoretical framework that can assimilate and integrate major schools of thought such that key concepts become more clearly defined and intelligible. Many argue that broad systemic perspectives such as the UT tend to sacrifice breadth and fine-grained details when applied to more specific concepts. The UT argues that it affords both breadth and depth and this project explores that hypothesis as applied to borderline personality disorder. Second to the extent that this first aim is successful, what should emerge is a new networked conception of BPD that weaves its key features together in a manner that yields a richer, more integrated and intelligible picture of the core of the condition.

Borderline Personality Disorder Roy Krawitz, Wendy Jackson, 2008-01-31. Borderline personality disorder (BPD) is a psychiatric condition that affects nearly 2% of the general population, predominantly women. Symptoms of BPD include impulsivity, mood swings, unstable intense relationships, and feelings of chronic emptiness. Research on BPD has lagged behind that on other mental health conditions such as depression and psychosis, primarily due to the lack of evidence of effective treatment, but also due

to the stigma historically associated with the condition Fortunately this situation is changing with improved treatments now available and improved clinician organizational willingness to engage with those with a diagnosis of BPD This book provides people with BPD and their families and friends with an authoritative user friendly and easily readable resource that is both informative about the condition and provides practical help in assisting improved outcomes The authors draw from the latest research and decades of clinical experience to provide a compassionate understanding of BPD and treatments for the condition Numerous case histories and patient perspectives have been included to help illustrate key points and bring the book alive for the reader The book is balanced integrated and respectful of patients family and friends and clinicians In an area often associated with pessimism and negativity this book provides patients and families with realistic hope

the review of the current research but also its theoretical integration into practice Borderline Personality Disorder has two goals to build a comprehensive theory of etiology which takes into account biological psychological and social factors to suggest treatment guidelines which are consistent with this theory and which are based on the findings of clinical trials Based on the most up to date clinical research available Borderline Personality Disorder shows how these complex disorders are shaped by biological vulnerability brought on by psychological experiences and influenced by social conditions
