Harvey, 1999 **Dipmeter and Borehole Image Log Technology** Michael Poppelreiter, Carmen Garcia-Carballido, Martin Kraaijveld, 2010-08-25 Borehole imaging is among the fastest and most accurate methods for collecting high resolution subsurface data Recent breakthroughs in acquisition tool design and modeling software provide real time subsurface images of incredible detail from the drill bit straight to a workstation This text portrays key applications of dipmeter and image log data across the exploration and production life cycle **Geological Well Logs** S. Luthi, 2013-03-14 When I joined Schlumberger in 1982 I was surprised to find very few geologists in the company and the few there were worked more as log analysts than geologists The reason for this became soon clear to me Except for the dipmeter there was no tool and no other service that was considered geological Schlumberger geologists were supposed to work with dipmeters and if they had a taste for it the natural gamma ray spectroscopy logs It turned out that my timing was fortunate At Schlumberger's research center in Ridgefield Connecticut a prototype electrical imaging tool had been designed and after having spent three years in the Middle East I was transferred there The first field test results were just coming in and the images were startling We could see geological details that nobody had ever seen from a log cross beds unconformities pebbles fractures folds faults No cores were needed to confirm the reality of these data they were too real to be artifacts
