Petroleum Refining. Vol...., 2000-01-01 This five volume series covers the entire range of technologies used in the petroleum refining industry The books are intended for students and for the engineers and technicians who operate in refineries In addition to the detailed description of the conventional separation processes used in refining this volume devotes ample space to discussing future developments These include enhancements to existing technologies and the introduction of new technologies and separation processes that are as yet seldom implemented in the industry Contents 1 Basics of separation operations 2 Thermodynamics phase equilibria 3 Mass transfer and efficiency of separation operations 4 Distillation absorption and stripping 5 Distillation absorption and stripping in the petroleum industry 6 Liquid liquid extraction 7 Solvent extraction in the oil industry 8 Crystallization 9 Crystallization in the oil industry solvent dewaxing 10 Adsorption 11 Adsorption in the oil and gas industry 12 Membrane separation References Index [Wind Generated Ocean Waves](#) I.R. Young, 1999-03-23 The goals of wind wave research are relatively well defined to be able to predict the wind wave field and its effect on the environment That environment could be natural beaches the atmosphere etc or imposed by human endeavour ports harbours coastal settlements etc Although the goals are similar the specific requirements of these various fields differ considerably This book attempts to summarise the current state of this knowledge and to place this understanding into a common frame work It attempts to take a balanced approach between the pragmatic engineering view of requiring a short term result and the scientific quest for detailed understanding Thus it attempts to provide a rigorous description of the physical processes involved as well as practical predictive tools **Structures** J.
