An Introduction to Child Language Development Susan H.Foster- Cohen,2014-06-17 This volume introduces the field of child language development studies and presents hypotheses in an accessible largely non technical language aiming to demonstrate the relationship between these hypotheses and interpretations of data It makes the assumption that having a theory of language development is as important as having reliable data about what children say and understand and it advocates a combination of both rationalist and more empiricist traditions In fact the author overtly argues that different traditions provide different pieces of the picture and that taking any single approach is unlikely to lead to productive understanding Susan Foster Cohen explores a range of issues including the nature of prelinguistic communication and its possible relationship to linguistic development early stages of language development and how they can be viewed in the light of later developments the nature and role of children s experience with the language s around them variations in language development due to both pathological and non pathological differences between children and in the latter case between the languages they learn later oral language development and literacy The approach is distinctly psycholinguistic and linguistic rather than sociolinguistic although there is significant treatment of issues which intersect with more sociolinguistic concerns e g literacy language play and bilingualism There are exercises and discussion questions throughout designed to reinforce the ideas being presented as well as to offer the student the opportunity to think beyond the text to ideas at the cutting edge of research The accessible presentation of key issues will appeal to the intended undergraduate readership and will be of interest to those taking courses in language development linguistics developmental psychology educational linguistics and speech pathology The book will also serve as a useful introduction to students wishing to pursue post graduate courses which deal with child language development

challenges in language acquisition or such as how well the my child is doing are commonly present for researchers clinicians teachers and parents Parent child interaction offers a privileged setting to observe children s behavior in multiple communicative situations which often is only available to the parents caregivers For this reason within the broad range of methods used to assess children s development parental questionnaires are widely used being a non invasive and inexpensive instrument to obtain information which is otherwise difficult to obtain Data obtained with the many questionnaires covering various aspects of child development and communicative competence are equally relevant for basic research and everyday clinical practice Development and use of parental questionnaires as well as data interpretation frequently require an interdisciplinary and cross sector approach bringing together developmental psychologists and practitioners This interdisciplinarity is assumed but rarely addressed directly
