Children And Learning:

Young Children Learning Barbara Tizard, Martin Hughes, 1984 his fascinating account of an unusual research project challenges many assumptions about how young children learn and how best to teach them In particular it turns upside down the commonly held belief that professionals know better than parents how to educate and bring up children and it throws doubt on the theory that working class children underachieve at school because of a language deficit at home **Children Teach Children** Alan Gartner, Mary Conway Kohler, Frank Riessman, 1971 **Children's Learning in Early Childhood** Sean MacBlain, Author, 2021-03-03 Everything you need to know about Learning Theories in Early Childhood practice This book explores the key theorists and theories that form the foundation of learning and development in early childhood Building your own understanding and knowledge of children s learning it then helps you develop the skills of translating theory into practice How does this book support you The structure of the book mirrors your student learning journey to compliment your course and seminar reading Parts 1 and 2 help you develop your reflective and analytical skills through critical questions photographs and discussion points Part 3 gives real life case studies to help you understand how the theories can be practically applied in settings to improve your own practice **Beyond Special Needs** Dr Susan Hart, 1996-05-28 Susan Hart s book is a welcome relief from the prescriptive empiricism of much current writing on how to respond to the difficulties in learning experienced by many children and young people The detail of the sustained analysis is also in marked contrast to the superficial summarising that often passes for critique Support for Learning The author places a refreshing emphasis upon the dynamic interactional nature of learning and teaching reminding us of the need to recognize the active part played by all pupils in shaping their own learning which is mediated through the agendas which they bring to bear on classroom activities and which may be quite different from those of their teachers International Journal of Inclusive Education This book offers practitioners a new way of thinking about and pursuing concerns about children s learning It sets aside the limiting language of learning difficulties and special needs and suggests an approach which starts from a different perspective This approach assumes that any learning situation always has the potential to yield new ideas for enhancing children s learning if we do the kinds of thinking that open up new possibilities The author offers an account of this innovative thinking suggesting a framework of questions that teachers can use drawing on their existing knowledge and expertise to generate new insight and possibilities for practice She also provides a basis for deciding which possibilities to pursue in the case of a particular child The approach is explained in a practical and usable way for classroom teachers drawing on detailed accounts of children s learning and the outcomes of a research study from which the ideas were derived *The Meaning Makers* Gordon Wells, 1987 This text focuses on children s language literacy and learning Based on the Bristol study Language at Home and at School which the author directed it follows the development of a representative sample of children from their first words to the end of primary education **Ants in Their Pants** Aerial Cross, 2009-06-01
