Integrable Systems and Algebraic Geometry Ron Donagi, Tony Shaska, 2020-03-02 A collection of articles discussing integrable systems and algebraic geometry from leading researchers in the field *Integrable Systems and Algebraic Geometry: Volume 2* Ron Donagi, Tony Shaska, 2020-04-02 Created as a celebration of mathematical pioneer Emma Previato this comprehensive book highlights the connections between algebraic geometry and integrable systems differential equations mathematical physics and many other areas The authors many of whom have been at the forefront of research into these topics for the last decades have all been influenced by Previato s research as her collaborators students or colleagues The diverse articles in the book demonstrate the wide scope of Previato s work and the inclusion of several survey and introductory articles makes the text accessible to graduate students and non experts as well as researchers The articles in this second volume discuss areas related to algebraic geometry emphasizing the connections of this central subject to integrable systems arithmetic geometry Riemann surfaces coding theory and lattice theory **Prolegomena to a Middlebrow Arithmetic of Curves of Genus 2** J. W. S. Cassels, E. V. Flynn, 1996-04-18 A unique insight into the topic of curves of genus 2 by two of the world s leading practitioners [Algebraic Integrability, Painlevé Geometry and Lie Algebras](#) Mark Adler, Pierre van Moerbeke, Pol Vanhaecke, 2013-03-14 This Ergebnisse volume is aimed at a wide readership of mathematicians and physicists graduate students and professionals The main thrust of the book is to show how algebraic geometry Lie theory and Painlevé analysis can be used to explicitly solve integrable differential equations and construct the algebraic tori on which they linearize at the same time it is for the student a playing ground to applying algebraic geometry and Lie theory The book is meant to be reasonably self contained and presents numerous examples The latter appear throughout the text to illustrate the ideas and make up the core of the last part of the book The first part of the book contains the basic tools from Lie groups algebraic and differential geometry to understand the main topic **Flat Rank Two Vector Bundles on Genus Two Curves** Viktoria Heu, Frank Loray, 2019-06-10 The authors study the moduli space of trace free irreducible rank 2 connections over a curve of genus 2 and the forgetful map towards the moduli space of underlying vector bundles including unstable bundles for which they compute a natural Lagrangian rational section As a particularity of the genus case connections as above are invariant under the hyperelliptic involution they descend as rank logarithmic connections over the Riemann sphere The authors establish explicit links between the well known moduli space of the underlying parabolic bundles with the classical approaches by Narasimhan Ramanan Tyurin and Bertram This allows the authors to explain a certain number of geometric phenomena in the considered moduli spaces such as the classical configuration of the Kummer surface The authors also recover a Poincaré family due to Bolognesi on a degree 2 cover of the Narasimhan Ramanan moduli space They explicitly compute the Hitchin integrable system on the moduli space of Higgs bundles and compare the Hitchin Hamiltonians with those found by van Geemen Previato They explicitly describe the

isomonodromic foliation in the moduli space of vector bundles with connection over curves of genus 2 and prove the transversality of the induced flow with the locus of unstable bundles

Complex Abelian Varieties Herbert Lange, Christina Birkenhake, 2013-03-09 Abelian varieties are special examples of projective varieties As such they can be described by a set of homogeneous polynomial equations The theory of abelian varieties originated in the beginning of the nineteenth century with the work of Abel and Jacobi The subject of this book is the theory of abelian varieties over the field of complex numbers and it covers the main results of the theory both classic and recent in modern language It is intended to give a comprehensive introduction to the field but also to serve as a reference The focal topics are the projective embeddings of an abelian variety their equations and geometric properties Moreover several moduli spaces of abelian varieties with additional structure are constructed Some special results on Jacobians and Prym varieties allow applications to the theory of algebraic curves The main tools for the proofs are the theta group of a line bundle introduced by Mumford and the characteristics to be associated to any nondegenerate line bundle They are a direct generalization of the classical notion of characteristics of theta functions

Cellular Automata Giancarlo Mauri, Samira El Yacoubi, Alberto Dennunzio, Katsuhiko Nishinari, Luca Manzoni, 2018-09-03 This book constitutes the proceedings of the 13th International Conference on Cellular Automata for Research and Industry ACRI 2018 held in Como Italy in September 2018 The 47 full papers presented in this volume were carefully reviewed and selected from 64 submissions This volume contains invited contributions and accepted papers from the main track and from the three organized workshops The volume is organized in the following topics biological systems modeling simulation and other applications of CA multi agent systems pedestrian and traffic dynamics synchronization and control theory and cryptography asynchronous cellular automata and crowds traffic and cellular automata
