Principles of Heating, Ventilation, and Air Conditioning in Buildings John W. Mitchell, James E. Braun, 2012-03-06 Principles of HVAC in Buildings by J W Mitchell and J

E Braun provides foundational knowledge for the behavior and analysis of HVAC systems and related devices. The emphasis is on the application of engineering principles and features a tight integration of physical descriptions with a software program that allows performance to be directly calculated with results that provide insight into actual behavior. The examples end of chapter problems and design projects are more than exercises; they represent situations that an engineer might face in practice and are selected to illustrate the complex and integrated nature of an HVAC system or piece of equipment. Coverage of material applicable to the field is broad: a Fundamentals section on thermodynamics, fluid flow, heat transfer, and psychrometrics; types of HVAC systems and components; comfort and air quality criteria; a Loads section on weather data processing, design heating and cooling loads; an Equipment section on air and water distribution systems, heating and cooling coils, cooling towers, refrigeration equipment; and a Design and Control section on seasonal energy use, control techniques, supervisory control, the HVAC design process, and the rules of thumb often used in design. The textbook provides a foundation for students and practicing engineers to design HVAC systems for buildings. In addition, there is extensive supplemental on-line material that provides more in-depth and comprehensive treatment of equipment and component modeling and performance that is geared towards current and future equipment design engineers.

**1995 ASHRAE Handbook -- HVAC Applications (I-P Edition)**, 1995-06 ASHRAE Centennial. This edition of the ASHRAE Handbook Series focuses on HVAC application. Two new chapters have been added to the new volume with information on kitchen ventilation and building commissioning. Numerous chapters have been updated and expanded to include more discussions, data tables, figures, and charts. HVAC requirements for an extensive range of applications are covered, including descriptions of the equipment needed to create specific conditions. Contains new information on HVAC and exhaust for photolabs, ground source heat pump technology, legionnaires disease, healthcare facilities, owning and operating costs, and pharmaceutical clean rooms.

**Handbook of Financing Energy Projects** Albert Thumann, Eric Woodroof, 2005-01-13. Lack of funding is the number one project killer. Most organizations do not have extra cash lying around; therefore, most projects must be financed to get approval. Your energy project may be one of many potential projects from which the CFO can choose only a few. If you present your proposal with positive cash flow, your project will stand out from the crowd. Filled with practical yet innovative financing methods, *Handbook of Financing Energy Projects* provides effective solutions to finance problems. The authors delineate the key success factors for structuring a financed energy project and getting it approved. They examine and assess the full scope of current project financing, including energy service performance, contracting, rate of return analysis, and energy savings measurement and verification. You get all the facts you need to assess a project's payback in advance, avoid potential risks and hidden costs, and assure that their energy projects are an economic success. There are many correct ways to assemble and finance an energy management project. The possibilities are limited only by your creativity. This book explores successful solutions for every situation and builds increased confidence in your understanding of the many successful ways to assemble

and finance an energy management project

**The Airliner Cabin Environment and the Health of Passengers and Crew** National Research Council, Division on Earth and Life Studies, Board on Environmental Studies and Toxicology, Committee on Air Quality in Passenger Cabins of Commercial Aircraft, 2002-02-03 Although poor air quality is probably not the hazard that is foremost in people's minds as they board planes it has been a concern for years. Passengers have complained about dry eyes sore throat dizziness headaches and other symptoms. Flight attendants have repeatedly raised questions about the safety of the air that they breathe. *The Airliner Cabin Environment and the Health of Passengers and Crew* examines in detail the aircraft environmental control systems the sources of chemical and biological contaminants in aircraft cabins and the toxicity and health effects associated with these contaminants. The book provides some recommendations for potential approaches for improving cabin air quality and a surveillance and research program.

Controls and Automation for Facilities Managers Viktor Boed, 1998-06-23 Building owners and managers expect fully automated and energy efficient operations on line diagnostic of systems parameters to prevent failures and on line diagnostic of problems prior to exposing occupants to deteriorating environmental conditions. A simple HVAC control is no longer acceptable by current standards. *Controls and Automation for Facilities Managers* examines principles and applications of HVAC engineering outlining information for design development of operations logic systems diagnostics and building of environmental conditions with reliability and minimum operating cost. The book moves from the principles of mechanical engineering related to HVAC systems through DDC applications engineering thereby summarizing complex topics of electrical engineering for mechanical engineers. Individual chapters provide essential information on related mechanical HVAC engineering controls strategies and examples of basic algorithms for on line diagnostics. Guide DDC application engineers to a more thorough understanding of mechanical engineering disciplines i.e. the psychrometric chart as well as guide mechanical engineers to a more thorough understanding of DDC applications engineering i.e. direct digital controllers and systems. Outline information on current topics. Discussions also include Indoor air quality presenting material for facilities engineers as well as controls and consulting engineers. Utilities metering describing the distribution of real time
