physical concepts supporting the field of fiber lasers Fiber lasers characteristics are analyzed theoretically through simulations derived from numerical models The authors cover fundamental principles involved in the generation of laser light through both continuous wave CW and pulsing It also covers experimental configuration and characterization for both CW and Q switching The authors describe the simulation of fiber laser systems and propose numerical modelling of various fiber laser schemes MATLAB modelling and numerical computational methods are used throughout the book to simulate different fiber laser system configurations This book will be highly desirable and beneficial for both academics and industry professionals to have ample examples of fiber laser approaches that are well thought out and fully integrated with the subjects covered in the text This book is written to address these needs
