

## TARMAC SL7 - ASSEMBLE THE HANDLEBAR (NO GAP STEM)

**WARNING!** The stem is designed without a gap between the stem body and the faceplate at the upper bolt area. The upper bolts must be tightened so the faceplate is flush against the stem body before being torqued. Failure to do this can result in structural damage to the handlebar.

Not all Tarmac models are equipped with the upfront mount.

28. Using the corresponding hex key, loosen (counter-clockwise) and remove the four bolts on the stem faceplate, then remove the stem faceplate from the stem.

29. Place the handlebar against the stem, then place the stem faceplate over the handlebar with the stem faceplate and stem holes aligned.

30. Add the washer to each bolt, then starting with the upper bolts, thread the bolts through the stem faceplate into the stem body making sure they are equally finger-tightened.

31. Adjust the handlebar to the desired position making sure it is centered.

32. Using a torque wrench and the corresponding hex bit, gradually torque the upper bolts, alternating from the left to the right, to the specified torque setting found on the stem and/or in the user manual (where applicable).

33. Using a torque wrench and the corresponding hex bit, gradually torque the lower bolts, alternating from the left to the right, to the specified torque setting found on the stem and/or in the user manual (where applicable).
