**Machine Learning Perspectives of Agent-Based Models** Pedro Campos, Anand Rao, Joaquim Margarido, 2025-09-19 This book provides an overview of agent based modeling ABM and multi agent systems MAS emphasizing their significance in understanding complex economic systems with a special focus on the emerging properties of heterogeneous agents that cannot be deduced from the characteristics of individual agents ABM is highlighted as a powerful tool for studying economics especially in the context of financial crises and pandemics where traditional models such as dynamic stochastic general equilibrium DSGE models have proven inadequate Containing numerous practical examples and applications with R Python Julia and Netlogo the book explores how learning particularly machine learning can be integrated into multi agent systems to enhance the adaptation and behavior of agents in dynamic environments It compares different learning approaches including game theory and artificial intelligence highlighting the advantages of each in modeling economic phenomena **PyTorch**

**Essentials: A Comprehensive Guide to Machine Learning Techniques** Adam Jones, 2024-12-03 PyTorch Essentials A Comprehensive Guide to Machine Learning Techniques is an essential resource for programmers researchers and enthusiasts eager to enhance their mastery of machine learning and artificial intelligence through the PyTorch framework This guide deftly combines theoretical foundations with hands on applications covering everything from basic tensor manipulation and neural network creation to sophisticated architectures such as CNNs RNNs and generative models Additionally it delves into reinforcement learning optimization strategies and best practices for deployment empowering readers with the skills to develop scalable production ready solutions Whether advancing your research or solving real world industry challenges this book serves as your indispensable guide to mastering machine learning with PyTorch

**Anticipatory Optimization for Dynamic Decision Making** Stephan Meisel, 2011-06-23 The availability of today s online information systems rapidly increases the relevance of dynamic decision making within a large number of operational contexts Whenever a sequence of interdependent decisions occurs making a single decision raises the need for anticipation of its future impact on the entire decision process Anticipatory support is needed for a broad variety of dynamic and stochastic decision problems from different operational contexts such as finance energy management manufacturing and transportation Example problems include asset allocation feed in of electricity produced by wind power as well as scheduling and routing All these problems entail a sequence of decisions contributing to an overall goal and taking place in the course of a certain period of time Each of the decisions is derived by solution of an optimization problem As a consequence a stochastic and dynamic decision problem resolves into a series of optimization problems to be formulated and solved by anticipation of the remaining decision process However actually solving a dynamic decision problem by means of approximate dynamic programming still is a major scientific challenge Most of the work done so far is devoted to problems allowing for formulation of the underlying optimization problems as linear programs Problem domains like scheduling and routing where linear

programming typically does not produce a significant benefit for problem solving have not been considered so far Therefore the industry demand for dynamic scheduling and routing is still predominantly satisfied by purely heuristic approaches to anticipatory decision making Although this may work well for certain dynamic decision problems these approaches lack transferability of findings to other related problems This book has serves two major purposes It provides a comprehensive and unique view of anticipatory optimization for dynamic decision making It fully integrates Markov decision processes dynamic programming data mining and optimization and introduces a new perspective on approximate dynamic programming Moreover the book identifies different degrees of anticipation enabling an assessment of specific approaches to dynamic decision making It shows for the first time how to successfully solve a dynamic vehicle routing problem by approximate dynamic programming It elaborates on every building block required for this kind of approach to dynamic vehicle routing Thereby the book has a pioneering character and is intended to provide a footing for the dynamic vehicle routing community

**Advances in Neural Information Processing Systems 7** Gerald Tesauro, David S. Touretzky, Todd Leen, 1995 November 28 December 1 1994 Denver Colorado NIPS is the longest running annual meeting devoted to Neural Information Processing Systems Drawing on such disparate domains as neuroscience cognitive science computer science statistics mathematics engineering and theoretical physics the papers collected in the proceedings of NIPS7 reflect the enduring scientific and practical merit of a broad based inclusive approach to neural information processing The primary focus remains the study of a wide variety of learning algorithms and architectures for both supervised and unsupervised learning The 139 contributions are divided into eight parts Cognitive Science Neuroscience Learning Theory Algorithms and Architectures Implementations Speech and Signal Processing Visual Processing and Applications Topics of special interest include the analysis of recurrent nets connections to HMMs and the EM procedure and reinforcement learning algorithms and the relation to dynamic programming On the theoretical front progress is reported in the theory of generalization regularization combining multiple models and active learning Neuroscientific studies range from the large scale systems such as visual cortex to single cell electrotonic structure and work in cognitive scientific is closely tied to underlying neural constraints There are also many novel applications such as tokamak plasma control Glove Talk and hand tracking and a variety of hardware implementations with particular focus on analog VLSI

REINFORCEMENT LEARNING FUNDAMENTALS - LEARNING THROUGH REWARDS AND PUNISHMENTS Dr. Chithra K, Anirudhan Adukkathayar C, Ismail Keshta, Dr. Haewon Byeon, 2023-10-30 Reinforcement learning is a subfield within the broader domain of machine learning The crux of the matter is in selecting the optimal course of action to maximize prospective profitability within a given set of conditions It is utilized by various software and computers to determine the optimal course of action or action route to effectively respond to a given event In the process of supervised learning the training data includes the

ground truth and the model is trained using the correct response In contrast in the context of reinforcement learning the absence of a definitive correct answer is seen Instead the reinforcement agent exercises its discretion in selecting the appropriate behaviors required to successfully complete the assigned task This observation highlights a significant distinction between the two modalities of learning In supervised learning the training dataset contains the solution key enabling the model to be trained using the correct answers directly In the context of unsupervised learning the model is trained using erroneous or inaccurate responses Without access to a training dataset it is implausible for the system to acquire knowledge by any alternative means The mathematical impossibility of the situation is evident Reinforcement learning RL is a subfield within the domain of artificial intelligence AI that focuses on the examination and analysis of decision making processes The objective of this study is to ascertain the optimal approach for individuals to navigate a certain context with the aim of maximizing the potential outcomes resulting from their endeavors The data employed in reinforcement learning RL is obtained through many machine learning algorithms each of which acquires knowledge through its distinct iteration of the trial and error process Data is not considered a constituent of the input employed in either supervised or unsupervised machine learning methodologies Both of these machine learning algorithms are not classified as supervised Reinforcement learning is a computational approach that involves the utilization of algorithms to acquire knowledge from previous actions consequences and afterwards choose the most advantageous path of action Following each stage the algorithm is provided with input that aids in evaluating the appropriateness neutrality or inaccuracy

**Mathematical Foundations of Reinforcement Learning** Shiyu Zhao,2025-01-21 This book provides a mathematical yet accessible introduction to the fundamental concepts core challenges and classic reinforcement learning algorithms It aims to help readers understand the theoretical foundations of algorithms providing insights into their design and functionality Numerous illustrative examples are included throughout The mathematical content is carefully structured to ensure readability and approachability The book is divided into two parts The first part is on the mathematical foundations of reinforcement learning covering topics such as the Bellman equation Bellman optimality equation and stochastic approximation The second part explicates reinforcement learning algorithms including value iteration and policy iteration Monte Carlo methods temporal difference methods value function methods policy gradient methods and actor critic methods With its comprehensive scope the book will appeal to undergraduate and graduate students post doctoral researchers lecturers industrial researchers and anyone interested in reinforcement learning [Industrial Engineering and Applications](#)

Loon-Ching Tang,2023-08-15 The field of industrial engineering IE has a very wide scope from production processes and automation to supply chain management but the scope of IE techniques has expanded beyond the traditional domains of application and is now relevant to areas that matter most to society at large This book presents the proceedings of ICIEA 2023 the 10th International Conference on Industrial Engineering and Applications held in Phuket Thailand from 4 to 6 April

2023 The conference was conducted in hybrid mode with close to 100 delegates attending in person and about 50 participants attending online A total of 272 submissions were received for the conference of which 120 were accepted for presentation with 83 of those published here as full papers These papers cover a wide range of topics within the scope of industrial and systems engineering including but not limited to supply chain and logistics quality and reliability advanced manufacturing and production scheduling to ergonomics and man machine systems interfaces In particular a significant number of papers are devoted to machine learning techniques and applications beyond the traditional manufacturing sector to include healthcare sustainability assessment and other social issues Offering an overview of recent research and novel applications the book will be of interest to all those whose work involves the application of industrial engineering techniques
