Instability Mechanism and Disaster Prevention of the Jointed Rockmass Shuren Wang, Hongyuan Liu, Chengguo Zhang, Xu Chang, 2024-06-13 Discontinuities such as cracks fissures bedding planes etc resulting from different geological processes are commonly found in rock masses and often play a critical role in the initiation propagation and coalescence of new cracks due to stress redistribution caused by engineering activities and natural disturbances It is challenging to determine the instability mechanism of jointed rock masses but it is vital for estimating instability disasters in jointed rock engineering

Strengthening of Concrete Structures with Adhesively Bonded Reinforcement Konrad Zilch, Roland Niedermeier, Wolfgang Finckh, 2014-06-13 Design and construction in existing contexts is becoming increasingly important and often the structures sometimes of historical interest can be preserved easily and at minimum cost by employing strengthening measures Existing concrete members can be strengthened by using adhesives to bond additional reinforcing elements onto or into those members This book explains the design rules together with their background and uses examples to illustrate their use specifically for slabs beams and columns Concrete member strengthening measures can take the form of for example flexural strengthening with externally bonded surface mounted CFRP strips CF sheets and steel plates flexural strengthening with CFRP strips bonded in slits near surface mounted reinforcement shear strengthening with externally bonded CF sheets and steel plates and column strengthening with CF sheets as confining reinforcement The explanations and background information provided are mainly based on the new German guideline Strengthening of Concrete Members with Adhesively Bonded Reinforcement by the German Committee for Structural Concrete DAFStb This is the first European guideline to regulate this topic in the form of a supplement to the Eurocode As it is planned to produce a document in a future Eurocode 2 the DAFStb guideline serves as a starting point The authors are extensively involved in the planning design operation and inspection of buildings for preservation and reconstruction and in the updating of European Technical Approval Guidelines ETAGs and design rules Selected chapters from the German concrete yearbook are now being published in the new English Beton Kalender Series for the benefit of an international audience Since it was founded in 1906 the Ernst Sohn Beton Kalender has been supporting developments in reinforced and prestressed concrete The aim was to publish a yearbook to reflect progress in ferro concrete structures until as the book s first editor Fritz von Emperger 1862 1942 expressed it the tempestuous development in this form of construction came to an end However the Beton Kalender quickly became the chosen work of reference for civil and

Growth in Aerospace Composites Aniello Riccio,2015-01-07 This book presents novel methods for the simulation of
damage evolution in aerospace composites that will assist in predicting damage onset and growth and thus foster less
conservative designs which realize the promised economic benefits of composite materials The presented integrated
numerical experimental methodologies are capable of taking into account the presence of damage and its evolution in
composite structures from the early phases of the design conceptual design through to the detailed finite element method
analysis and verification phase The book is based on the GARTEUR Research Project AG 32 which ran from 2007 to 2012 and
documents the main results of that project In addition the state of the art in European projects on damage evolution in
composites is reviewed While the high specific strength and stiffness of composite materials make them suitable for
aerospace structures their sensitivity to damage means that designing with composites is a challenging task The new
approaches described here will prove invaluable in meeting that challenge *Poromechanics II* J.L. Auriault,C. Geindreau,P.
