Assessment of Daylight Performance in Buildings B. Ghenni,2015-04-08 This title deals with the many advantages associated to the use of natural light comparing architectural experiences technological devices and calculation methods It provides an introduction to the problems and solutions of enhancing and conveying the right dose of daylight inside buildings giving attention to energy savings and visual comfort

Daylighting and Integrated Lighting Design Christopher Meek,Kevin Van Den Wymelenberg,2014-10-17 Daylighting and Integrated Lighting Design provides architects building designers and students clear direction for the successful inclusion of daylight and integrated electric light in buildings It presents design teams with the performance analysis resources energy saving estimates and user satisfaction results they need in order to make informed decisions regarding daylighting and lighting

design Written by two well known experts in the field the book provides critical geometric and material relationships along with proven design process activities offered in a quick reference format with sufficient context to address the range of associated issues present in any building project both the fundamentals and applications which cover design concepts and practice activities applicable to all integrated lighting projects specific directives for how the concepts covered are applied in a range of common design scenarios including architectural rules of thumb instructions for ensuring visual comfort and preferred approaches for electric lighting control integration In demonstrating these necessary insights to designers the authors employ an iterative analysis of common daylighting patterns and illustrate and annotate both successful and unsuccessful examples via built form and simulation Part of the PocketArchitecture series this is the ideal pocketbook for any designer serious about reducing the energy impact of their buildings

An Interactive Performance-based Expert System for Daylighting in Architectural Design Jaime Michelle Lee Gagne, Massachusetts Institute of Technology. Department of Architecture, 2011 Design practitioners are increasingly using digital tools during the design process however building performance simulation continues to be more commonly utilized for analysis rather than as a design aid Additionally while simulation tools provide the user with valuable information they do not necessarily guide the designer towards changes which may improve performance For designing with daylighting it is essential that the designer consider performance during the early design stage as this is the stage when the most critical design decisions are made such as the overall building geometry and facade elements This thesis proposes an interactive goal based expert system for daylighting design intended for use during the early design phase The system gives the user the ability to input an initial model and a set of daylighting performance goals Performance areas considered are illuminance and glare risk from daylighting The system acts as a virtual daylighting consultant guiding the user towards improved performance while maintaining the integrity of the original design and of the design process itself This thesis consists of three major parts development of the expert system implementation of the system including a user interface and performance assessment The two major components of the expert system are a daylighting specific database which contains information about the effects of a variety of design conditions on resultant daylighting performance and a fuzzy rule based decision making logic which is used to determine those design changes most likely to improve performance for a given design The expert system has been implemented within Google SketchUp along with a user interface which allows a designer to fully participate in the design process Performance assessment is done in two ways first by comparing the effectiveness of the system to a genetic algorithm a known optimization method and second by evaluating the success of the user interactivity of the tool its use within the design process and its potential to improve the daylighting performance of early stage designs

Daylight, Design and Place-Making Hisham Elkadi, Sura Al-Maiyah, 2020-12-20 Daylight Design and Place Making examines the role of daylight in creating and revealing the wonders of heritage and contemporary architecture Shifting from a purely technical approach to daylighting this book places

importance on the creation of meaningful aesthetics through an understanding of context and culture Cultural applications of light in architecture differ depending on various historical technological and social characteristics Increasingly there is a revival of interest in contemporary architecture using daylight as an essential contextual ingredient in the design process By examining the architecture of daylight in different locales and setting these in their historical contexts the book argues that appropriate use of daylight will ensure not only visual and thermal comfort in the urban setting and aid in energy efficiency but also will contribute to the overall identity of new buildings particularly in urban regeneration projects This book brings together an analysis of technical aspects of daylight performance and environmental impact with discussions on the psychology of daylighting and its influence in shaping perceptions of our built environment It will be an ideal read for academics and researchers interested in architecture and cultural studies

Performance to Enable a Goal-driven Design Process Siân Alexandra Kleindienst,Massachusetts Institute of Technology.

Department of Architecture,2010 cont Finally a simple solar heat gain indicator is demonstrated using the Balance Point calculation method and the metric Solar Heat Scarcity Surplus SHS is used to convey the urgency of allowing more direct solar gain or shading it This thesis is part of the Lightsolve project which aims to specifically address the needs of the architect during early design stages Specifically Lightsolve aims to produce fast unique design analyses based on local annual climate data with reasonably accurate and intuitive outputs to promote good decision making Such resources could enable a desirable shift in schematic stage design practices and move daylighting analysis one step closer to achieving best practice recognition

Overhang Design Methods Sanja Stevanovic,2022-09-08 It is estimated that windows in office buildings are responsible for one third of energy used for their heating and cooling Designing window shading that balances often contradictory goals of preventing excessive heat gains in hot periods without compromising beneficial heat gains in cold periods or visual comfort in indoor spaces of modern buildings with highly glazed facades is an interesting multi objective optimisation problem that represents an active research topic in the field of building energy and daylighting Window overhangs are the simplest and most traditional shading devices that are easy to install highly cost effective require low or no maintenance and offer unobstructed views outside This book provides a review of overhang design methods for optimal thermal and daylighting performance It starts with a historical overview of methods based on solar positions and shading masks Next it discusses current research methodology including shading calculation methods ways of quantifying thermal and daylighting overhang effectiveness and the use of multi objective optimisation approaches together with the case

studies that employ them It further covers methods for designing innovative overhang types such as NURBS outlined overhangs and PV integrated dynamic overhangs The appendix classifies published overhang case studies according to major climate type and latitude of their locations As such the book presents a valuable resource for understanding subtle nuances of interaction between solar radiation shading devices and indoor comfort The intended target audience are building energy researchers interested in optimisation of window shading devices

The Performance of Daylighting with Shading Device in Architecture Design Chia-peng Chou,2004 *Daylighting Design* Mohamed Boubekri,2014-09-25 For thousands of years people have aligned their homes with the sun This tendency decreased with the availability of artificial light Yet due to the health effects of artificial light as well as rising energy costs the issue of designing with daylight is of great importance again today The primary objective of daylight systems is to make maximum use of daylight for certain building types and climates The book documents the various dimensions of the optimum use of daylight with particular reference to window orientation light distribution and prism technology and discusses the health and economic related aspects In the final chapter existing design concepts are documented in detail including the expansion of the Art Institute of Chicago Museum in the United States by Renzo Piano Building Workshop Terminal 3 of the Changi Airport in Singapore by Skidmore Owings Merrill and the Clever House in Germany by Behnisch Architekten

The Impact of Façade Design on Daylighting Performance in Office Buildings Sawsan Mohamad Saridar,University of Newcastle upon Tyne. School of Architecture, Planning and Landscape,2004 *Daylight Performance of Buildings* Marc Fontoynt,2014-05-01 As part of Daylight Europe the daylighting behaviour of 60 buildings was observed and measured during a three year period Buildings of many different types sizes and ages were included from offices to museums libraries churches houses airports and factories from Classical buildings to modern constructions and from a small single room to an office of over 100 000 square meters The results of the study of each building are presented extensively illustrated in colour with the unusual features and main lessons highlighted The book also includes details of the monitoring procedures the results of and comparisons with simulations the outcome of post occupancy evaluation and a summary of the major findings These show the extraordinary potential of daylighting techniques to improve amenity and energy performance for the benefit of the occupants and building managers They also demonstrate how often opportunities are missed and the frequency of problems of overheating or glare Above all they demonstrate the beauty elegance and scope of daylight design
