Bachelard Science And Objectivity:

Bachelard: Science and Objectivity Mary Tiles,1984-12-06 Concentrates on Bachelard's central critique of scientific knowledge Reveals that his concern with discontinuities in the history of science is in accord with recent debates about the nature of rationality and the incommensurability of different scientific theories **The Formation of the Scientific Mind** Gaston Bachelard,2002 Gaston Bachelard is one of the indispensable figures in the history of 20th century ideas The broad scope of his work has had a lasting impact in several fields notable philosophy architecture and literature **The Problem of Naturalism** Brian Lightbody,2013-05-09 Philosophers often use the term naturalism in order to describe their work It is commonplace to see a metaphysical epistemological and or ethical position self described and described by others as one that is naturalized But what if anything does the term naturalized add or subtract to the position being articulated I demonstrate in *The Problem of Naturalism Analytic and Continental Perspectives* that the term naturalism connotes such a broad meaning that it is difficult to demarcate naturalism from philosophy itself Still many philosophers have tried to provide non trivial and non vacuous definitions of the term My book by and large argues that such attempts are unsuccessful Instead I argue that naturalism is an attitude and neither a methodology nor a substantive position I then articulate the guidelines the naturalist needs to follow as well as the virtues he or she needs to practice in order for the term naturalism to do any meaningful work Much of the book explains and then critiques the various attempts to define naturalism in the Anglo American secondary literature Some of the criticisms I raise seem to emanate from the internal logic of the naturalistic position being expressed However others have emerged from gleaning the work of such Continental thinkers as Nietzsche Husserl Heidegger and Foucault I use these thinkers in order to expose the unjustified implicit and sometimes explicit assumptions that many naturalistic philosophers presume to hold when they attempt to render a clear distinct and robust naturalist position [The Oxford companion to philosophy](#) Ted Honderich,1995 Entries on philosophers schools of thought subjects theories debates concepts practical issues **Postanalytic and Metacontinental** Jack Reynolds,James Chase,James Williams,2010-06-03 *The Routledge Handbook of the History of Philosophy of Science After Kant* Flavia Padovani,Adam Tamas Tuboly,2025-12-16 The History of Philosophy of Science HOPOS is a relatively new yet rapidly growing field Emerging from diverse approaches within the history and philosophy of science it encompasses a wide range of philosophical reflections on the nature methods and subject matter of science all considered within their historical contexts In this outstanding Handbook the first of its kind an international roster of contributors provide the first full survey of the discipline Organized into four sections comprising 50 chapters the Handbook covers the following themes Perspectives on philosophy of science including the historical and sociological turns and feminist philosophy of science Traditions and movements in philosophy of science with a focus on Victorian philosophy of science French positivism logical empiricism pragmatism and naturalism Specific scientific theories issues and concepts in relativity quantum mechanics realism and anti

realism Philosophy of the special sciences including mathematics chemistry biology psychology and psychiatry and the social sciences The Routledge Handbook of the History of Philosophy of Science After Kant is essential reading for students and researchers in philosophy of science history of science the sociology of science and science studies It will also be of interest to those in the sciences seeking a philosophical and historical perspective on core areas such as mathematics physics and biology

Back to the Rough Grounds of Praxis Daniel Franklin Pilario, 2005 What is praxis How do we do theology from its perspective These are the main questions which this book seeks to answer As propaedeutic to theological reflection it surveys the notion of praxis in the philosophical sociological and anthropological traditions from Aristotle and Marx to contemporary theories It argues that Pierre Bourdieu's theory of practice achieves a critical synthesis of these different traditions making it a viable theological dialogue partner Bourdieu provides us with a praxeological theory to scrutinize the complexity of the social realm and an epistemological theory to understand the mystery of God's presence in these socio-historical conjunctures which serve as the privileged and only locus of His/Her revelation The author thus engages two theologians who take praxis/practice as central to their theological methods Clodovis Boff liberation theology and John Milbank radical orthodoxy From the perspective of its appropriated framework this work attempts to avoid the limitations as well as preserves the gains achieved by these two approaches as it also explores the rudiments of a theological method relevant to our post-Marxist and postmodern global contexts

Handbook for the Historiography of Science Mauro L. Condé, Marlon Salomon, 2023-09-30 This book aims to perform a critical and broad assessment of the historiography of science produced from the late nineteenth century to the early twenty-first century It presents its main authors' concepts, ideas, conceptions, and schools It also analyzes the historical circumstances of the rise of the discipline, history of science, and the relations of the historiography of science with related areas These chapters do not understand the historiography of science as a mere description or record of the history of science Instead they understand the historiography of science from the epistemological criteria and choices that guided the writing of the history of science in its different contexts In other words, more than describing the record of the various possibilities of historiographical approaches to science, the chapters carry out an epistemological reflection to assess the bases, possibilities, scope, and limits of different historiographical conceptions, authors, and traditions that have established the writing of the history of science This book can be conceived as a reference work not only for professional historians and philosophers but also for academics from different backgrounds who are initiating themselves in the universe of history and philosophy of science, be they scientists from different fields or young researchers from different backgrounds who want to start studying the history and philosophy of science

New Challenges to Philosophy of Science Hanne Andersen, Dennis Dieks, Wenceslao J. Gonzalez, Thomas Uebel, Gregory Wheeler, 2013-05-28 This volume is a serious attempt to open up the subject of European philosophy of science to real thought and provide the structural basis for the interdisciplinary development of its specialist fields but also to provoke reflection on the idea of European philosophy of science This efforts should foster a contemporaneous reflection on what might be meant by philosophy of science in Europe and European philosophy of science and how in fact awareness of it could assist philosophers interpret and motivate their research through a stronger collective identity The overarching aim is to set the background for a collaborative project organising systematising and ultimately forging an identity for European philosophy of science by creating research structures and developing research networks across Europe to promote its development

Phenomenology of Natural Science L. Hardy, Lester Embree,1992

Contemporary philosophy seems a great swirling almost chaos Every situation must seem so at the time probably because

philosophy itself resists structuration and because personal and political factors within as well as without the discipline must fade in order for the genuinely philosophical merits of performances to be assessed Nevertheless some remarks can still be made to situate the present volume For example at least half of philosophy on planet Earth is today pursued in North America which is not to say that this portion is any less internally incoherent than the whole of which it thus becomes the largest part and the present volume is North American Incidentally the recognition of culturally geographic traditions and tendencies nowise implies that striving for cross cultural if not trans cultural philosophical validity has failed or ceased Rather it merely recognizes a significant aspect relevant from the historical point of view Episteme Aesthetics Ethics Etc mology Analytic Philosophy Marxism Existentialism Etc Figure 1 There are two main ways in which philosophical developments are classified One is in terms of tendencies movements and schools of thought and the other is in terms of traditional sub disciplines When there is little contention among schools the predominant way is in terms of sub disciplines such as aesthetics ethics politics etc Today this mode of classification can be seen to intersect with that in terms of movements and tendencies both of which are represented in the above chart
