## **Bacterial Transport:**

*Microbial Transport Systems* Günther Winkelmann, 2008-01-08 Transport of molecules across the cell membrane is a fundamental process of all living organisms. It is essential for understanding growth, development, nutrition, as well as uptake and excretion of exogenous or synthesized molecules. Microbes represent general and basic functional systems where many transport processes have been studied on a molecular basis. Knowledge of the microbial transport processes will provide new perspectives to treatments by inhibitors, drugs, antibiotics, vitamins, growth promotion compounds, activators, and toxic compounds of various kinds. **Bacterial Transport** Barry P. Rosen, 1978 **Mechanisms and Regulation of Carbohydrate Transport in Bacteria** Milton H. Saier, 2014-06-28 **Mechanisms and Regulation of Carbohydrate Transport in Bacteria** reviews the developments in the study of the mechanisms and regulation of carbohydrate transport in prokaryotic organisms. The book presents the progress made in the understanding of transport and regulation of carbohydrates in bacteria at the molecular level. Aspects on the important structural and topographical features of several sugar permeases in *Escherichia coli* are elucidated; the energy coupling processes are clearly delineated for most but not all types of bacterial carbohydrate permease systems and mechanistic details of the translocation processes are proposed. Molecular biologists, microbial biochemists, and cell biologists will find the book a good source of information. **Remediation of Petroleum**

**Contaminated Soils** Eve Riser-Roberts, 2020-11-25 This book combines the results of current research with essential background material to provide complete in-depth coverage of every aspect of in situ and ex situ bioremediation, as well as an extensive overview of the physical and chemical processes currently available for treating petroleum-contaminated soils. Critical information has been collected and assembled under one cover to provide a convenient reference for anyone who must contend with this worldwide problem. **Remediation of Petroleum Contaminated Soils: Biological, Physical, and Chemical Processes** describes how to optimize the biodegradation of petroleum hydrocarbons in soil-water systems. It reports on the susceptibility of various petroleum components to biodegradation by microorganisms and considers all groups of microorganisms for their potential contributions. The book also deals with problem areas such as the transport of organisms, oxygen, or nutrients throughout the subsurface, as well as biodegradation of polynuclear aromatic hydrocarbons (PAHs) and nonaqueous phase liquids (NAPLs). In addition, the book presents a variety of methods for monitoring bioremediation. This reference discusses current soil remediation processes and includes many innovative approaches. It also investigates means of controlling volatile organic compounds (VOCs) and leachate and addresses methods for collecting and treating these secondary waste streams. The expansive coverage of this book will furnish readers with a wide range of options for developing treatment strategies and for customizing procedures for specific requirements. **Bacterial Energetics** Irwin Clyde Gunsalus, John Robert Sokatch, L. **Bacterial Membranes and the Respiratory Chain** Nina Samoïlovna Gel'man, Marina Arturovna Lukoïanova, Dmitriï Nikolaevich Ostrovskii, 1975-08 The most valuable service Dr Gel man and her colleagues have performed for the many investigators of bacterial membrane systems in producing their first excellent monograph on *The Respiratory Apparatus of Bacteria* in 1966 has been continued and expanded in the preparation of this volume The au thors have brought together in a single volume much of the detail of investiga tions of bacterial membranes at the ultrastructura11eve1 and the chemical and biochemical organiza11eve1s The approach in bringing together this rap idly increasing volume of discovery has been both comprehensive and system atic with a constant awareness of the importance of the molecular and func tional properties and relationships existing in various bacterial membranes The monograph naturally reflects the authors interest and their own inti mate involvement in the elucidation at the molecular level of the respiratory chains organized in the prokaryotic bacterial membrane system It is entirely appropriate that the chapter devoted to this topic should occupy a substantial proportion of this monograph Indeed had this volume been prepared at this very moment that proportion would have been even greater as the work in Roles of Extracellular Polymeric Substances (EPS) in the Transport, Retention, Detachment, and Deposition of Trichloroethylene (TCE) Degrading Toluene Oxidizing Bacteria in Porous Media Aksara Putthividhya, 2004

**Journal of Bacteriology** Charles-Edward Amory Winslow, James Morgan Sherman, John Roger Porter, 1924

**Molecular Mechanisms of Transport** Ernesto Quagliariello, Ferdinando Palmieri, 1992 The Proceedings of the 22nd Symposium of the Bari Meetings provides a comprehensive and timely record of the biochemical aspects of biomembrane transport The vast field of biomembrane transport has made great strides towards the understanding of its mechanisms by the molecular approach This book collects papers by young members of the biochemical community concentrating on this specific aspect of biomembrane transport and comprising the most recent results in the area More transport systems are being defined in terms of their catalysts pumping systems and carriers Further the description of transport has advanced to describe its regulation control and mechanisms by which energy drives transport Transport systems in a variety of membranes such as cell membranes mitochondria and bacteria are discussed Thus this volume describes major achievements and new openings of interest to scientists from a variety of fields involving biological transport      **Metabolic Pathways: Metabolic transport** David Morris Greenberg, Henry James Vogel, Lowell E.
