Before Civilization:

War before Civilization Lawrence H. Keeley, 1997-12-18 For the last fifty years most popular and scholarly works have agreed that prehistoric warfare was rare harmless and unimportant According to this view it was little more than a ritualized game where casualties were limited and the effects of aggression relatively mild Lawrence Keeley's groundbreaking *War Before Civilization* offers a devastating rebuttal to such comfortable myths and debunks the notion that warfare was introduced to primitive societies through contact with civilization Building on much fascinating archeological and historical research and offering an astute comparison of warfare in civilized and prehistoric societies from modern European states to the Plains Indians of North America Keeley convincingly demonstrates that prehistoric warfare was in fact more deadly more frequent and more ruthless than modern war He cites evidence of ancient massacres in many areas of the world and surveys the prevalence of looting destruction and trophy taking in all kinds of warfare again finding little moral distinction between ancient warriors and civilized armies Finally and perhaps most controversially he examines the evidence of cannibalism among some preliterate peoples But Keeley goes beyond grisly facts to address the larger moral and philosophical issues raised by his work What are the causes of war Are human beings inherently violent How can we ensure peace in our own time Challenging some of our most dearly held beliefs Keeley's conclusions are bound to stir controversy

The Life Cycle of Civilizations Stephen Blaha, 2002 This book is an expanded version of *The Rhythms of History* the book that made macro History into a semi quantitative Science New features include 1 an appendix showing how the history of Mayan civilization conforms to the book's Theory of Civilizations including the latest information from the newly discovered hieroglyphic texts at Dos Pilas Guatemala 2 an appendix on the sub Saharan African civilization Great Zimbabwe showing it fits the theory 3 a comparison of the theory with Toynbee's observations showing the many new features resulting from a quantitative theory 4 numerous historic pictures and illustrations of the civilizations of Mankind including a number of newly found pictures from the nineteenth century 5 a chapter describing the potentially disturbing implications of patterns in civilizations Are we free and the implications for the Philosophy of History and 6 expanded comments in many sections such as the sections on the future of Humanity the role of China and the Islamic West conflict The book begins with a hard hitting tell it like it is chapter on the current international situation with statements such as The United States and Western civilization is now engaged in a small Vietnam style war on a global scale at the time of this writing This war is still in the early stages of development The attack on the World Trade Center by Muslim terrorists may have the same significance for Western civilization that the Gothic invasion of Rome itself in the prime of the Empire the First Century AD had for the future of Rome They may be a premonition of things to come not necessarily soon but perhaps in a few centuries The Goths returned three centuries later and remained as permanent conquerors Over the long term the West must free itself from a dependence on Muslim oil Muslim oil revenues are the fuel for the development of weapons of mass destruction by Iran and Iraq In the future they will

supply the revenues of an expansionist Islam As the silk trade looted the Roman Empire of its gold and reduced its economy the trade in oil is looting the West of its prosperity and freedom of action The rise and fall of oil prices has a significantly greater effect on the American and world economy than the raising and lowering of interest rates by central banks The book then describes a theory of civilizations that led to these observations Currently unfolding events seem to be fulfilling the predictions which were made last year including the new North Korean threat that seems to be consistent with a predicted breakdown in Japan North Korea will create major problems with Japan As this is being written Japan is moving Aegis destroyers nearer to North Korea and preparing for defense THE EVENTS DESCRIBED IN THIS BOOK AND ITS PREDECESSOR APPEAR TO BE HAPPENING AS PREDICTED LAST YEAR According to Theory of Civilizations the basis of civilizations was laid with a genetic mutation found by Ding et al 40 000 years ago that created bold enterprising individuals who became the leadership group of civilizations a group that Toynbee called the creative minority When the world s climate became warmer and more stable 10 000 years ago the seeds of civilizations began to germinate Thus the origin of civilizations is tied to human genetics The book then shows that a long term social behavior pattern of mankind based on four generation trends causes civilizations to develop and oscillate in patterns of routs and rallies Civilizations rise and fall due to their internal human dynamics The theory of civilization is developed using equations and 68 diagrams that show a close detailed match between the theory and the actual history of all known Asian European and African civilizations over the last 5 500 years The theory projects the future of today s civilizations including the future of Western and Islamic civilizations It also successfully describes the interaction of barbarians and civilizations the interaction of two civilizations the impact of modern technology on civilizations it accounts for the Luddite reaction to the Industrial Revolution the impact of major environmental events on civilizations e g the collapse of Minoan civilization due to a volcanic eruption and the disintegration of civilizations It also accounts for the tremendous growth phases seen in many civilizations such as the building of the great pyramids in Egyptian civilizations Based on the theory fifteen new civilizations are identified including new prehistoric Chinese and Egyptian civilizations Having shown the success of the theory for earth civilizations it considers the form of extraterrestrial civilizations and calculates their impact on Western civilization should contact be established The book also shows the need for the colonization of space and nearby planets if mankind is to progress in the future The book analyzes the impact of the lengthening life spans of mankind on the future of civilizations Predictions are made for the state of the world for 2050 and 2100 A detailed understanding the past enables the theory of civilizations to make predictions for the future Defining Progress to be the sum of the world s civilizations the book shows that Progress seems to be approximately linearly increasing over the last 5 500 years A plot of Progress appears on the book s cover shown on this web page together with the contributions of each civilization to Progress The vertical order of the civilizations in the plot is arbitrary Older civilizations tend to be lower in the plot The book is a tour de force that makes History a Science rather than a collection of random

events It is the first detailed mathematical treatment of history Although the book contains mathematics it is intended for the general reader as well as the mathematically inclined There are copious verbal descriptions of the theory as well as many figures plotting the theory versus historical events A qualitative descriptive theory of civilizations is also presented that is like a Dow Theory of Civilizations

What Causes War? Greg Cashman, 2013-07-29 Now in a thoroughly revised and updated edition this classic text presents a comprehensive survey of the many alternative theories that attempt to explain the causes of interstate war For each theory Greg Cashman examines the arguments and counterarguments considers the empirical evidence and counterevidence generated by social science research looks at historical applications of the theory and discusses the theory s implications for restraining international violence Among the questions he explores are Are humans aggressive by nature Do individual differences among leaders

matter How might poor decision making procedures lead to war Why do leaders engage in seemingly risky and irrational policies that end in war Why do states with internal conflicts seem to become entangled in wars with their neighbors What roles do nationalism and ethnicity play in international conflict What kinds of countries are most likely to become involved in war Why have certain pairs of countries been particularly war prone over the centuries Can strong states deter war Can we find any patterns in the way that war breaks out How do balances of power or changes in balances of power make war more likely Do social scientists currently have an answer to the question of what causes war Cashman examines theories of war at the individual substate nation state dyadic and international systems level of analysis Written in a clear and accessible style this interdisciplinary text will be essential reading for all students of international relations
