

# Linking School Assessments to Research-Based Practices in Beginning Reading: Improving Programs and Outcomes for Students With and Without Disabilities

*Scott Baker and Sylvia Smith*

**C**alls in education for an increase in the use of research-based practices is perhaps most common in the area of beginning reading. Three highly publicized syntheses of research in beginning reading have been conducted in the last decade (Adams, 1990; National Reading Panel, 2000; Snow, Burns, & Griffin, 1998), and all conclude there is a substantial scientific knowledge base that should form the basis of instruction. However, consensus on which beginning reading programs to use, or the process schools should follow in developing programs that are research-based, has not been achieved.

In this paper, we describe and provide examples of how individual elementary schools can demonstrate that their programs in beginning reading are helping to bridge the gap between research and practice. In particular, we show how data on student learning generated by individual schools was used to document program effects and improvements in student achievement. Examples from two schools we worked with to bridge the gap between research and practice are used (Baker, Smith, Kameenui, McDonnell, & Gallop, 1999). Before presenting these examples, we discuss how ambiguities surrounding the meaning of research-

based practice contribute to the importance of schools playing an active role in helping to define the term.

## Conceptual Dilemmas in the Research to Practice Gap

Establishing an effective beginning reading program at the school level is a complex and difficult task. Determining essential program components for all students at each grade, determining what adjustments must be made for students with disabilities, and documenting that programs actually leads to satisfactory learning outcomes for students requires complex decisions on the part of teachers and administrators at each school.

Effectively translating research findings into practice routines clearly is much more intricate than having researchers develop the empirical knowledge base for teachers, who then work out the details of classroom implementation on their own. Differences between research and practice settings that argue against this vertical transmission model—where researchers pass down the knowledge that classroom teachers implement—are extensive and more obvious now than they used to be (Malouf & Schiller, 1995).
