**Behavior of the Lower Organisms (Classic Reprint)** H. S. Jennings,2015-08-05 Excerpt from Behavior of the Lower Organisms The objective processes exhibited in the behavior of the lower organisms particularly the lower animals form the subject of the present volume The conscious aspect of behavior is undoubtedly most interesting But we are unable to deal directly with this by the methods of observation and experiment which form the basis for the present work Assertions regarding consciousness in animals whether affirmative or negative are not susceptible of verification This does not deprive the subject of consciousness of its interest but renders it expedient to separate carefully this matter from those which can be controlled by observation and experiment For those primarily interested in the conscious aspects of behavior a presentation of the objective facts is a necessary preliminary to an intelligent discussion of the matter But apart from their relation to the problem of consciousness and its development the objective processes in behavior are of the highest interest in themselves By behavior we mean the general bodily movements of organisms These are not sharply distinguishable from the internal physiological processes this will come forth clearly in the present work But behavior is a collective name for the most striking and evident of the activities performed by organisms Its treatment as subsidiary to the problems of consciousness has tended

to obscure the fact that in behavior we have the most marked and in some respects the most easily studied of the organic processes Such treatment has made us inclined to look upon these processes as something totally different from the remainder of those taking place in organisms In behavior we are dealing with actual objective processes whether accompanied by consciousness or not and we need a knowledge of the laws controlling them of the same sort as our knowledge of the laws of metabolism In many respects behavior presents an exceptionally favorable field for the study of some of the chief problems of life The processes of behavior are regulatory in a high degree Owing to their striking character the way in which regulation occurs becomes more evident than in most other fields so that they present a most favorable opportunity for study of this matter About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at [www.forgottenbooks.com](http://www.forgottenbooks.com) This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works
