Behavior-based Robotics Ronald C. Arkin, 1998 Foreword by Michael Arbib This introduction to the principles design and practice of intelligent behavior based autonomous robotic systems is the first true survey of this robotics field The author presents the tools and techniques central to the development of this class of systems in a clear and thorough manner Following a discussion of the relevant biological and psychological models of behavior he covers the use of knowledge and learning in autonomous robots behavior based and hybrid robot architectures modular perception robot colonies and future trends in robot intelligence The text throughout refers to actual implemented robots and includes many pictures and descriptions of hardware making it clear that these are not abstract simulations but real machines capable of perception cognition and action
