Behavioural Medicine In Cardiovascular Disorders:

Behavioural Medicine in Cardiovascular Disorders T. Elbert,W. Langosch,Andrew Steptoe,D. Vaitl,1988-03-15

Cardiovascular disorders are the major cause of death in the industrialized world Contributions to this volume take account of the social behavioral emotional and personality factors associated with these diseases Chapters outline basic psychophysiological mechanisms in the development of cardiovascular disorders and discuss recent results in the behavioral management of these conditions Stressing practical implementation of techniques by the practitioner the chapters fall into four sections psychophysiological aspects of essential hypertension behavioral management of hypertension prevention and rehabilitation of coronary heart disease and behavioral aspects of cardiac arrhythmia and related problems Each of the four sections is preceded by an introduction which outlines the issues considered

Behavioral Medicine Approaches to Cardiovascular Disease Prevention Kristina Orth-Gomer,Neil Schneiderman,2013-05-13 Cardiovascular disease CVD is the number one killer of men and women in industrialized countries In older age groups CVD is also the most important cause for hospitalization and in many countries it is the basis of early retirement from work Thus CVD is associated with enormous costs for care and loss of productivity as well as for disabilities pensions etc All this has motivated clinicians and scientists to develop and implement new methodologies and technologies to better care for patients who are hospitalized for heart disease Efforts to improve care in the acute phases of coronary heart disease CHD have been successful During the last decade the immediate mortality risk of a patient admitted to coronary care for a suspected myocardial infarction or other acute coronary syndrome has decreased to less than 10% Despite these achievements CVD continues to represent a major threat to the health of middle aged and elderly men and women This volume addresses myriad aspects of CHD prevention including biobehavioral and psychosocial factors behavioral epidemiology behavioral intervention models and policy The first section of the text provides an introduction to CVD prevention and behavioral medicine The second section introduces two theoretically different approaches to preventive action high risk and population based strategies The third section describes and discusses the important questions of how behavioral sciences can be conceptually integrated into traditional medically based preventive efforts The fourth section presents both population and high risk behavioral intervention approaches In summary this volume examines the social environment and its potentials for preventive actions reviews the psychosocial and biobehavioral mechanisms involved in these effects and describes concrete and practical implementations of behavioral medicine knowledge as they have been applied to CHD prevention

Handbook of Research Methods in Cardiovascular Behavioral Medicine Neil Schneiderman,Stephen M. Weiss,Peter G. Kaufmann,2013-11-21 Cardiovascular disease continues to be the number one killer of men and women in industrialized countries In older age groups CVD is also the most important cause for hospitalization and in many countries it is the basis of early retirement from work Thus CVD is associated with enormous costs for care and loss of productivity as well as for disabilities pensions etc All this has motivated clinicians and scientists to develop and implement new methodologies and technologies to better care for patients who are hospitalized for heart disease Efforts to improve care in the acute phases of coronary heart disease CHD have been successful During the last decade the immediate mortality risk of a patient admitted to coronary care for a suspected myocardial infarction or other acute coronary syndrome has decreased to less than 10% Despite these achievements CVD continues to represent a major threat to the health of middle aged and elderly men and women This volume addresses myriad aspects of CHD prevention including biobehavioral and psychosocial factors behavioral epidemiology behavioral intervention models and policy The first section of the text provides an introduction to CVD prevention and behavioral medicine The second section introduces two theoretically different approaches to preventive action high risk and population based strategies The third section describes and discusses the important questions of how behavioral sciences can be conceptually integrated into traditional medically based preventive efforts The fourth section presents both population and high risk behavioral intervention approaches In summary this volume examines the social environment and its potentials for preventive actions reviews the psychosocial and biobehavioral mechanisms involved in these effects and describes concrete and practical implementations of behavioral medicine knowledge as they have been applied to CHD prevention

nearly 1 000 000 lives each year in ioral and biomedical science knowledge and techniques the United States Havlik Feinleib 1979 relevant to the understanding of health and illness and The Framingham study among others has iden the application of this knowledge and these techniques to prevention diagnosis treatment and rehabilitation tified three major risk factors implicated in the de Schwartz Weiss 1978 velopment of CHD smoking elevated serum cho lesterol and high blood pressure Castelli et at This concept of bibehavioral collaboration 1986 Given that these factors account for less challenged scientists and clinicians of many disci than 50% of the variance associated with CHD plines to consider how they might more effectively Jenkins 1976 it has become obvious that addi develop diagnostic treatment and prevention tional risk factors must be identified if further pro strategies by merging their perspectives to address gress is to be made in disease prevention and simultaneously among others behavioral psy control Cardiovascular Behavioral Medicine Shari Waldstein, Willem Kop, Leslie Katzel, 2016-01-14 Cardiovascular disease is the leading cause of morbidity and mortality in the United States and most other westernized nations It is well recognized that traditional risk factors for cardiovascular disease have limited predictive utility in the identification of new cardiovascular disease cases and outcomes Thus investigators have argued that application of a biopsychosocial research paradigm in this field may be of particular utility in understanding cardiovascular disease pathogenesis Accordingly a subdiscipline within the field of behavioral medicine cardiovascular behavioral medicine examines interrelations among biological behavioral psychological and social factors in cardiovascular health and disease In 1989 Schneiderman and colleagues published a seminal work entitled Research Methods in Cardiovascular Behavioral Medicine Since that time there has been an exponential increase in the amount and scope of work in this topic area but no similar edited volume has been undertaken Here we propose to create a compendium of work in the field of cardiovascular behavioral medicine the purposes of which are to summarize research in this area promote multidisciplinary research and clinical practice and encourage researchers and clinicians to consider all relevant facets of the disease process in their evaluation and study of cardiovascular disease pathogenesis and outcomes In this volume we propose several sections Section I will provide an overview of basic cardiovascular anatomy and physiology cardiovascular disease classification and application of the biopsychosocial model to the study of cardiovascular disease Section II will cover sociodemographic behavioral psychosocial biomedical and psychophysiological risk factors for cardiovascular disease Each chapter will offer a discussion of construct definition measurement issues and epidemiological evidence for relations to cardiovascular disease Chapters on biomedical and psychophysiological risk factors will also describe sociodemographic behavioral and psychosocial correlates of these risk factors Section III will summarize literature on biopsychosocial investigation of specific cardiovascular disease entities the evidence base for relevant biopsychosocial interventions and evaluation of the impact of cardiovascular diseases on behavior Section IV will cover select special topics in the field of cardiovascular behavioral medicine including common comorbidities special populations special issues and data analytic issues This volume is unique in

several respects First there is no similar work available in terms of the scope of topic coverage Second the inclusion of relevant measurement issues and construct definitions of a comprehensive set of risk factors will be of great assistance to researchers and clinicians in this area who wish to improve their assessment of these variables yet are not familiar with or trained in the various methodologies Third the use of multidisciplinary contributors will greatly enhance the utility of the work The primary audiences for this work are multidisciplinary researchers clinicians and students in cardiovascular behavioral medicine or behavioral medicine more broadly Representative disciplines include psychology psychiatry medicine nursing and epidemiology The prospective authors listed below represent each of these disciplines

Behavioral Aspects of Cardiovascular Disease Alvin Philip Shapiro, Andrew Baum, 1991 Smoking diet stress coping and exercise among other behaviors and psychological states are now clearly implicated in the development of cardiovascular diseases Prevention based largely on altering behaviors that contribute to this chronic disease is now as important a goal as is treatment of those already afflicted This volume based on a recent meeting of the Academy of Behavioral Medicine Research addresses several important areas of research in the general area of cardiovascular disease The topics covered reflect on important aspects of this phenomenon such as the long term development of coronary artery disease central nervous system CNS regulation of blood pressure heart rate and sympathetic tone playing a pivotal role in sympathetic activity and hypertension learned blood pressure modulation and baroreceptor activation as a means of reducing the aversiveness of stress or noxious stimulation and the notion that symptoms of heart disease or infarction may occur in the absence of organic heart disease Having been impressed by the recent advances in the field the editors of this book capture the wealth of newly acquired knowledge about behavioral factors in cardiovascular disease and how the body's nervous endocrine and cardiovascular systems work together

Anger and Hostility in Cardiovascular and Behavioral Disorders Margaret A. Chesney, Ray H. Rosenman, 1985

Behavioral Approaches to Cardiovascular Disease Richard S. Surwit, Redford B. Williams, David Shapiro, 1982

Cardiovascular Disorders and Behavior D. S. Krantz, A. Baum, J. E. Singer, Jerome L. Singer, 2013-10-31 First published in 1983 This is Volume III of the Handbook of Psychology and Health Cardiovascular diseases are arguably the largest cause of death in the United States This statement attests to the importance of understanding these disorders in order to be able to prevent ameliorate and reduce the devastation which this set of diseases can cause Cardiovascular disorders have also been the most intensely studied of those health hazards that have come to the attention of behavioral scientists The many ways in which these problems are influenced by environmental social and behavioral factors have provided a fertile ground for study by investigators of many disciplines and persuasions For these two reasons it is appropriate that a volume in this series be directed toward the study of cardiovascular disease

Behavior and Arteriosclerosis J. Alan Herd, Stephen M. Weiss, 2012-12-06 During the past decade cardiovascular medicine has made significant strides in the diagnosis and treatment of coronary heart disease and related disorders as well as developing a better understanding of potential

preventive risk reducing measures Highly sophisticated diagnostic instrumentation surgical procedures and emergency medical care have undoubtedly contributed greatly to the trend of declining mortality from cardiovascular events In the course of the extensive research efforts associated with this area it has become increasingly apparent that the identified coronary risk factors share the common element of lifestyle as a major determiner of health behaviors associated with these factors Further it is suspected that behavioral and environmental factors may play a significant contributory role toward the etiology and progression of arteriosclerosis through their effects on the central and peripheral nervous systems and associated neurohormonal response Considerable research effort has been devoted to identifying the risks associated with smoking elevated blood pressure and serum cholesterol Research development and modification is being vigorously pursued Behavioral research exploring the role of psychological stress factors social support networks stressful life events and the Type A/B behavior patterns has uncovered potentially meaningful associations between behavioral factors and arteriosclerosis as discussed in the succeeding chapters of this book

BEHAVIORAL MEDICINE IN CARDIOVASCULAR DISORDERS. B: DWORKIN ROCKSTROH (B, R ET AL.), 1988 Psychotherapy with Cardiac Patients Ellen A. Dornelas, 2008 Heart disease is the leading cause of the death in the United States and those who experience cardiac events suffer a wide range of psychological sequelae Yet few books show psychotherapy practitioners how they can modify their techniques to accommodate the unique needs of this population The author an experienced hospital based psychologist provides an orientation to this specialization and drawing on a variety of therapy models describes empirically supported intervention strategies After providing an overview of the cardiovascular system she discusses lifestyle and psychological risk factors for heart disease Subsequent chapters cover practical techniques for helping patients overcome depression anxiety and hostility all factors that complicate recovery A final group of chapters addresses factors that affect treatment effectiveness such as substance abuse problems overweight and sex differences Case illustrations are provided throughout

Social Support and Cardiovascular Disease Sally A. Shumaker, Susan M. Czajkowski, 2013-11-21 In this groundbreaking work distinguished contributors explore the myriad relationships between networks of social support and the development treatment and rehabilitation of individuals with cardiovascular disease Chapters span the range from conceptual to methodological issues and take into account gender environmental and cultural differences The book will provide a wealth of information for clinicians and students in the fields of behavioral medicine psychophysiology and cardiovascular disease

The Practice of Behavioural Medicine Shirley Pearce, Jane Wardle, 1989 Behavioral medicine has grown rapidly as clinical psychologists have come to recognize the tremendous potential for the psychological treatment of physical illness This book considers the use of psychological methods in the diagnosis and management of selected problems The authors describe the methods used in their particular area of expertise in enough detail to enable psychologists to put the procedures to work in clinical practice This is a unique contribution to the field for psychologists and other health professionals interested in
