A Course In Constructive Algebra Universitext:

A Course in Constructive Algebra Ray Mines,Fred Richman,Wim Ruitenburg,2012-09-10 The constructive approach to mathematics has enjoyed a renaissance caused in large part by the appearance of Errett Bishop s book Foundations of constructiue analysis in 1967 and by the subtle influences of the proliferation of powerful computers Bishop demonstrated that pure mathematics can be developed from a constructive point of view while maintaining a continuity with classical terminology and spirit much more of classical mathematics was preserved than had been thought possible and no classically false theorems resulted as had been the case in other constructive schools such as intuitionism and Russian constructivism The computers created a widespread awareness of the intuitive notion of an effecti ve procedure and of computation in principle in addi tion to stimulating the study of constructive algebra for actual implementation and from the point of view of recursive function theory In analysis constructive problems arise instantly because we must start with the real numbers and there is no finite procedure for deciding whether two given real numbers are equal or not the real numbers are not discrete The main thrust of constructive mathematics was in the direction of analysis although several mathematicians including Kronecker and van der waerden made important contributions to construc tive algebra Heyting working in intuitionistic algebra concentrated on issues raised by considering algebraic structures over the real numbers and so developed a handmaiden of analysis rather than a theory of discrete algebraic structures **A Course in Constructive Algebra** Ray Mines,Fred Richman,Wim Ruitenburg,1987-12-18 **Computational Algebraic Geometry** Frederic Eyssette,Andre Galligo,2012-12-06 The theory and practice of computation in algebraic geometry and related domains from a mathematical point of view has generated an increasing interest both for its rich theoretical possibilities and its usefulness in applications in science and engineering In fact it is one of the master keys for future significant improvement of the computer algebra systems e g Reduce Macsyma Maple Mathematica Axiom Macaulay etc that have become such useful tools for many scientists in a variety of disciplines The major themes covered in this volume arising from papers p sented at the conference MEGA 92 were Effective methods and complexity issues in commutative algebra projective geometry real geometry and algebraic number theory Algebra geometric methods in algebraic computing and applica tions MEGA 92 was the second of a new series of European conferences on the general theme of Effective Methods in Algebraic Geometry It was held in Nice France on April 21 25 1992 and built on the themes presented at MEGA 90 Livomo Italy April 17 21 1990 The next conference MEGA 94 will be held in Santander Spain in the spring of 1994 The Organizing committee that initiatiod and supervises this bi enniel conference consists of A Conte Torino J H Davenport Bath A Galligo Nice D Yu Grigoriev Petersburg J Heintz Buenos Aires W Lassner Leipzig D Lazard paris H M MOller Hagen T Mora Genova M Pohst DUsseldort T Recio Santander J J *Effective Methods in Algebraic Geometry* Teo Mora,1991 The symposium MEGA 90 Effective Methods in Algebraic Geome try was held in Castiglioncello Livorno Italy in April 17 211990 The themes we quote from the Call for

papers were the fol lowing Effective methods and complexity issues in commutative algebra pro jective geometry real geometry algebraic number theory Algebraic geometric methods in algebraic computing Contributions in related fields computational aspects of group theory differential algebra and geometry algebraic and differential topology etc were also welcome The origin and the motivation of such a meeting that is supposed to be the first of a series deserves to be explained The subject the theory and the practice of computation in alge braic geometry and related domains from the mathematical viewpoin has been one of the themes of the symposia organized by SIGSAM the Special Interest Group for Symbolic and Algebraic Manipulation of the Association for Computing Machinery SAME Symbolic and Algebraic Manipulation in Europe and AAECC the semantics of the name is vary ing an average meaning is Applied Algebra and Error Correcting Codes
