Information & On-Line Data in Astronomy D Egret, M.A Albrecht, 2012-12-06 The ability of storing managing and giving access to the huge quantity of data collected by astronomical observatories is one of the major challenges of modern astronomy At the same time the growing complexity of data systems implies a change of concepts the scientist has to manipulate data as well as information Recent developments of the WorldWideWeb bring interesting answers to these problems The book presents a wide selection of databases archives data centers and information systems Clear and up to date descriptions are included together with their scientific context and motivations Audience This volume provides an essential tool for astronomers librarians data specialists and computer engineers

**Data Analysis in Astronomy** V. di Gesù, L. Scarsi, P. Crane, J.H. Friedman, S. Levialdi, 2012-12-06 The international Workshop on Data Analysis in Astronomy was intended to give a presentation of experiences that have been acquired in data analysis and image processing developments and applications that are steadily growing up in Astronomy The quality and the quantity of ground and satellite observations require more sophisticated data analysis methods and better computational tools The Workshop has reviewed the present state of the art explored new methods and discussed a wide range of applications The topics which have been selected have covered the main fields of interest for data analysis in Astronomy The Workshop has been focused on the methods used and their significant applications Results which gave a major contribution to the physical interpretation of the data have been stressed in the presentations Attention has been devoted to the description of operational system for data analysis in astronomy The success of the meeting has been the results of the coordinated effort of several people from the organizers to those who presented a contribution and or took part in the discussion We wish to thank the members of the Workshop scientific committee Prof M Cappacioli Prof G De Biase Prof G Sedmak Prof A Zichichi and of the local organizing committee Dr R Buccheri and Dr M C Maccone together with Miss P Savalli and Dr A Gabriele of the E Majorana Center for their support and the unvaluable part in arranging the Workshop

Databases & On-line Data in Astronomy M.A Albrecht, D Egret, 2012-12-06 Data archiving has for many years been the most disregarded aspect of all data systems The increase in numbers of telescopes both groundbased and space borne and the increase in efficiency of detectors have generated overwhelming amounts of data Much of these data were and are not used on short timescales and should have been archived where they can be used later and or by others Archiving is essential Objects can change in the course of time New technological or scientific developments might require observing objects again The cost benefit ratio will become more and more important when considering the allocation of telescope time

The retrieval of old data can then be crucial At present there are a number of data collections and data retrieval systems This book includes a series of clear and up to date descriptions of many important available data systems For professional astronomers librarians and computer engineers

**Data Analysis in Astronomy IV** R. Buccheri,P. Crane,Vito di Gesù,M.C. Maccarone,L. Scarsi,H.U. Zimmermann,2012-12-06 In this book are reported the main results presented at the Fourth International Workshop on Data Analysis in Astronomy held at the Ettore Majorana Center for Scientific Culture Erice Sicily Italy on April 12 19 1991 The Workshop was preceded by three workshops on the same subject held in Erice in 1984 1986 and 1988 The first workshop Erice 1984 was dominated by presentations of Systems for Data Analysis the main systems proposed were MIDAS AIPS RIAIP and SAIA Methodologies and image analysis topics were also presented with the emphasis on cluster analysis multivariate analysis bootstrap methods time analysis periodicity 2D photometry spectrometry and data compression A general presentation on Parallel Processing was made which encompassed new architectures data structures and languages The second workshop Erice 1986 reviewed the Data Handling Systems planned for large major satellites and ground experiments
