Data Flow Computing:

Data Flow Computing John A. Sharp, 1985 This book is divided into four parts Part I discusses the ways in which computations can be modeled Part II builds on the formal model of computing introduced in the first section and discusses the implications for programming languages The implementation of the data flow model of computing and the various concepts necessary are discussed in Part III Part IV discusses how the data flow programming languages proposed could be implemented on the new machine architectures suggested in Part III

Data Flow Computing John A. Sharp, 1992 There is an increasing interest in data flow programming techniques This interest is motivated in part by the rapid advances in technology and the need for distributed processing techniques in part by a desire for faster throughput by applying parallel processing techniques and in part by search for a programming tool that is closer to the problem solving methods that people naturally adopts rather than current programming languages This book contains a selection of chapters by researchers on various aspects of the data flow approach in computing Topics covered include comparisons of various data flow machine designs data flow architectures intentional programming and operator nets and the relationship between data flow models and modern structured design techniques among others The book also includes a brief introduction to the data flow approach a bibliography and reviews of where research into data flow might be heading

the corresponding parameter is in the parameter memory and one status bit to indicate whether the stored information in the corresponding data parameter is to be reused. The tag memory outputs a fire signal signal R VALID when all of the necessary information has been stored in the data flow memories and thus when the instruction is ready to be fired to the processor.
