**Data Mining: A Heuristic Approach** Abbass, Hussein A., Sarker, Ruhul, Newton, Charles S., 2001-07-01 Real life problems are known to be messy dynamic and multi objective and involve high levels of uncertainty and constraints Because traditional problem solving methods are no longer capable of handling this level of complexity heuristic search methods have attracted increasing attention in recent years for solving such problems Inspired by nature biology statistical mechanics physics and neuroscience heuristics techniques are used to solve many problems where traditional methods have failed Data Mining A Heuristic Approach will be a repository for the applications of these techniques in the area of data mining

*Heuristic and Optimization for Knowledge Discovery* Abbass, Hussein A., Newton, Charles S., Sarker, Ruhul, 2001-07-01 With the large amount of data stored by many organizations capitalists have observed that this information is an intangible asset Unfortunately handling large databases is a very complex process and traditional learning techniques are expensive to use Heuristic techniques provide much help in this arena although little is known about heuristic techniques Heuristic and Optimization for Knowledge Discovery addresses the foundation of this topic as well as its practical uses and aims to fill in the gap that exists in current literature *Heuristics in Analytics* Carlos Andre Reis Pinheiro, Fiona McNeill, 2014-01-31 Employ heuristic adjustments for truly accurate analysis Heuristics in Analytics presents an approach to analysis that

accounts for the randomness of business and the competitive marketplace creating a model that more accurately reflects the scenario at hand With an emphasis on the importance of proper analytical tools the book describes the analytical process from exploratory analysis through model developments to deployments and possible outcomes Beginning with an introduction to heuristic concepts readers will find heuristics applied to statistics and probability mathematics stochastic and artificial intelligence models ending with the knowledge applications that solve business problems Case studies illustrate the everyday application and implication of the techniques presented while the heuristic approach is integrated into analytical modeling graph analysis text analytics and more Robust analytics has become crucial in the corporate environment and randomness plays an enormous role in business and the competitive marketplace Failing to account for randomness can steer a model in an entirely wrong direction negatively affecting the final outcome and potentially devastating the bottom line Heuristics in Analytics describes how the heuristic characteristics of analysis can be overcome with problem design math and statistics helping readers to Realize just how random the world is and how unplanned events can affect analysis Integrate heuristic and analytical approaches to modeling and problem solving Discover how graph analysis is applied in real world scenarios around the globe Apply analytical knowledge to customer behavior insolvency prevention fraud detection and more Understand how text analytics can be applied to increase the business knowledge Every single factor no matter how large or how small must be taken into account when modeling a scenario or event even the unknowns The presence or absence of even a single detail can dramatically alter eventual outcomes From raw data to final report Heuristics in Analytics contains the information analysts need to improve accuracy and ultimately predictive and descriptive power

*Data Mining and Constraint Programming* Christian Bessiere, Luc De Raedt, Lars Kotthoff, Siegfried Nijssen, Barry O'Sullivan, Dino Pedreschi, 2016-12-01 A successful integration of constraint programming and data mining has the potential to lead to a new ICT paradigm with far reaching implications It could change the face of data mining and machine learning as well as constraint programming technology It would not only allow one to use data mining techniques in constraint programming to identify and update constraints and optimization criteria but also to employ constraints and criteria in data mining and machine learning in order to discover models compatible with prior knowledge This book reports on some key results obtained on this integrated and cross disciplinary approach within the European FP7 FET Open project no 284715 on Inductive Constraint Programming and a number of associated workshops and Dagstuhl seminars The book is structured in five parts background learning to model learning to solve constraint programming for data mining and showcases

Stream Data Mining: Algorithms and Their Probabilistic Properties Leszek Rutkowski, Maciej Jaworski, Piotr Duda, 2019-05-17 This book presents a unique approach to stream data mining Unlike the vast majority of previous approaches which are largely based on heuristics it highlights methods and algorithms that are mathematically justified First it describes how to adapt static decision trees to accommodate data streams in this regard new splitting criteria are developed to guarantee that they are asymptotically equivalent to the classical batch tree Moreover new decision trees are designed leading to the original concept of hybrid trees In turn nonparametric techniques based on Parzen kernels and orthogonal series are employed to address concept drift in the problem of non stationary regressions and classification in a time varying environment Lastly an extremely challenging problem that involves designing ensembles and automatically choosing their sizes is described and solved Given its scope the book is intended for a professional audience of researchers and practitioners who deal with stream data e g in telecommunication banking and sensor networks

**Automating the Design of Data Mining Algorithms** Gisele L. Pappa, Alex Freitas, 2009-10-27 Data mining is a very active research area with many successful real world applications It consists of a set of concepts and methods used to extract interesting or useful knowledge or patterns from real world datasets providing valuable support for decision making in industry business government and science Although there are already many types of data mining algorithms available in the literature it is still difficult for users to choose the best possible data mining algorithm for their particular data mining problem In addition data mining algorithms have been manually designed therefore they incorporate human biases and preferences This book proposes a new approach to the design of data mining algorithms instead of relying on the slow and ad hoc process of manual algorithm design this book proposes systematically automating the design of data mining algorithms with an evolutionary computation approach More precisely we propose a genetic programming system a type of evolutionary

computation method that evolves computer programs to automate the design of rule induction algorithms a type of classification method that discovers a set of classification rules from data We focus on genetic programming in this book because it is the paradigmatic type of machine learning method for automating the generation of programs and because it has the advantage of performing a global search in the space of candidate solutions data mining algorithms in our case but in principle other types of search methods for this task could be investigated in the future INFORMS Conference Program Institute for Operations Research and the Management Sciences.
