*Databasing the Brain* Steven H. Koslow, Shankar Subramaniam, Shankar Prasanna Subramaniam, 2005-03-10 Prize or Award AAP Awards for Excellence in Professional and Scholarly Publishing 2006 *Scientific Visualization: The Visual Extraction of Knowledge from Data* Georges-Pierre Bonneau, Thomas Ertl, Gregory M. Nielson, 2006-01-20 One of the greatest scientific challenges of the 21st century is how to master organize and extract useful knowledge from the overwhelming flow of information made available by today's data acquisition systems and computing resources Visualization is the premium means of taking up this challenge This book is based on selected lectures given by leading experts in scientific visualization during a workshop held at Schloss Dagstuhl Germany Topics include user issues in visualization large data visualization unstructured mesh processing for visualization volumetric visualization flow visualization medical visualization and visualization systems The book contains more than 350 color illustrations *The History of Neuroscience in Autobiography* Larry R. Squire, 1996 Publisher supplied data This book is the second volume of autobiographical essays by distinguished senior neuroscientists it is part of the first collection of neuroscience writing that is primarily autobiographical As neuroscience is a young discipline the contributors to this volume are truly pioneers of scientific research on the brain and spinal cord This collection of fascinating essays should inform and inspire students and working scientists alike The general reader interested in science may also find the essays absorbing as they are essentially human stories about commitment and the pursuit of knowledge The contributors included in this volume are Lloyd M Beidler Arvid Carlsson Donald R Griffin Roger Guillemin Ray Guillery Masao Ito Martin G Larrabee Jerome Lettvin Paul D MacLean Brenda Milner Karl H Pribram Eugene Roberts and Gunther Stent Evolution of Nervous Systems Jon H. Kaas, 2007 *MAPPING: Management and Processing of Images for Population Imaging* Michel Dojat, Wiro Niessen, David N. Kennedy, 2017-09-04 Several recent papers underline methodological points that limit the validity of published results in imaging studies in the life sciences and especially the neurosciences Carp 2012 Ingre 2012 Button et al 2013 Ioannidis 2014 At least three main points are identified that lead to biased conclusions in research findings endemic low statistical power and selective outcome and selective analysis reporting Because of this and in view of the lack of replication studies false discoveries or solutions persist To overcome the poor reliability of research findings several actions should be promoted including conducting large cohort studies data sharing and data reanalysis The construction of large scale online databases should be facilitated as they may contribute to the definition of a collective mind Fox et al 2014 facilitating open collaborative work or crowd science Franzoni and Sauer mann 2014 Although technology alone cannot change scientists practices Wicherts et al 2011 Wallis et al 2013 Poldrack and Gorgolewski 2014 Roche et al 2014 technical solutions should be identified which support a more open science approach Also the analysis of the data plays an important role For the analysis of large datasets image processing pipelines should be constructed based on the best algorithms available and their performance should be objectively compared to diffuse the more relevant solutions

Also provenance of processed data should be ensured MacKenzie Graham et al 2008 In population imaging this would mean providing effective tools for data sharing and analysis without increasing the burden on researchers This subject is the main objective of this research topic RT cross listed between the specialty section Computer Image Analysis of Frontiers in ICT and Frontiers in Neuroinformatics Firstly it gathers works on innovative solutions for the management of large imaging datasets possibly distributed in various centers The paper of Danso et al describes their experience with the integration of neuroimaging data coming from several stroke imaging research projects They detail how the initial NeuroGrid core metadata schema was gradually extended for capturing all information required for future metaanalysis while ensuring semantic interoperability for future integration with other biomedical ontologies With a similar preoccupation of interoperability Shanoir relies on the OntoNeuroLog ontology Temal et al 2008 Gibaud et al 2011 Batrancourt et al 2015 a semantic model that formally described entities and relations in medical imaging neuropsychological and behavioral assessment domains The mechanism of Study Card allows to seamlessly populate metadata aligned with the ontology avoiding fastidious manual entrance and the automatic control of the conformity of imported data with a predefined study protocol The ambitious objective with the BIOMIST platform is to provide an environment managing the entire cycle of neuroimaging data from acquisition to analysis ensuring full provenance information of any derived data Interestingly it is conceived based on the product lifecycle management approach used in industry for managing products here neuroimaging data from inception to manufacturing Shanoir and BIOMIST share in part the same OntoNeuroLog ontology facilitating their interoperability ArchiMed is a data management system locally integrated for 5 years in a clinical environment Not restricted to Neuroimaging ArchiMed deals with multi modal and multi organs imaging data with specific considerations for data long term conservation and confidentiality in accordance with the French legislation Shanoir and ArchiMed are integrated into FLI IAM1 the national French IT infrastructure for in vivo imaging

**Blood-Brain Barriers** Rolf Dermietzel, David C. Spray, Maiken Nedergaard, 2006-04-10 This is the first handbook to integrate developmental and cellular aspects combining the different structural and functional features involved in the regulation of brain perfusion and neuronal function It highlights pharmacological and biomedical applications with sections on drug delivery and disease related states as well as explaining in detail the role of astrocytes shown to be an essential link between neurons and cerebral blood vessels In addition the book studies how the structural elements interact in response to the dynamics of neuronal activities necessitating adaptive mechanism of the interface A significant part of the book describes new approaches to how the barrier can be surmised for drug delivery and how it can be mimicked by artificial in vitro systems for drug testing Finally the involvement of the barrier in brain diseases is considered focusing on inflammatory and neurodegenerative disorders of the brain Covering basic knowledge as well as specific information dealing with very recent progress in blood brain interface research this book is of interest to neurobiologists neurologists biochemists and pharmacologists
