Dawn Of Animal Life A Biohistorical Study:

The Dawn of Animal Life Martin F. Glaessner,1984 This 1985 book examines the origin of the present diversity of marine invertebrate animals A brief review of the early stages in the history of life discusses the time scale of the relevant geological periods alongside corresponding events in the evolutionary sequence These views of the early history of life are then matched against the fossil record and conjectures drawn from the living fauna enabling the author to attempt an overview of the early diversification of marine animal life Transitions to the succeeding assemblages of shellbearing fossils in Palaeozoic rocks are discussed and a number of stratigraphic adjustments are suggested for the period in which evolutionary events had their greatest impact on oceans and marine rock strata The need for an interdisciplinary approach to early evolution is emphasized

The Paleobiological Revolution David Sepkoski,Michael Ruse,2015-03-04 The Paleobiological Revolution chronicles the incredible ascendance of the once maligned science of paleontology to the vanguard of a field With the establishment of the modern synthesis in the 1940s and the pioneering work of George Gaylord Simpson Ernst Mayr and Theodosius Dobzhansky as well as the subsequent efforts of Stephen Jay Gould David Raup and James Valentine paleontology became embedded in biology and emerged as paleobiology a first rate discipline central to evolutionary studies Pairing contributions from some of the leading actors of the transformation with overviews from historians and philosophers of science the essays here capture the excitement of the seismic changes in the discipline In so doing David Sepkoski and Michael Ruse harness the energy of the past to call for further study of the conceptual development of modern paleobiology

Variation and Evolution in Plants and Microorganisms National Academy of Sciences,2000-11-11 The present book is intended as a progress report on the synthetic approach to evolution as it applies to the plant kingdom With this simple statement G Ledyard Stebbins formulated the objectives of *Variation and Evolution in Plants* published in 1950 setting forth for plants what became known as the synthetic theory of evolution or the modern synthesis The pervading conceit of the book was the molding of Darwin s evolution by natural selection within the framework of rapidly advancing genetic knowledge At the time *Variation and Evolution in Plants* significantly extended the scope of the science of plants Plants with their unique genetic physiological and evolutionary features had all but been left completely out of the synthesis until that point Fifty years later the National Academy of Sciences convened a colloquium to update the advances made by Stebbins This collection of 17 papers marks the 50th anniversary of the publication of Stebbins classic Organized into five sections the book covers early evolution and the origin of cells virus and bacterial models protocist models population variation and trends and patterns in plant evolution

The Rise and Fall of the Ediacaran Biota Patricia Vickers-Rich,Patricia Komarower,2007 The Proterozoic and early Phanerozoic was a time punctuated by a series of significant events in Earth history Glaciations of global scale wracked the planet interfingered with dramatic changes in oceanic and atmospheric chemistry and marked changes in continental configuration It was during these dynamic and weedy times that metazoans first appeared diversified

culminating in the appearance of hard tissue skeletons and deep farming of the marine substrate in late Proterozoic and first few millions of years of the Phanerozoic This book is the culmination of two symposia of UNESCO International Geological Correlation Project 493 one in Prato Italy in 2004 the second in Kyoto Japan in 2006 Both dealt specifically with the precise timing of physical events and teasing out of the effects which these changing environments climates global chemistry and palaeogeography had on the development and diversification of animals culminating in the spectacular Ediacaran Vendian faunas of the late Precambrian
