Dancing Matrix Robin Marantz Henig, 1994-02 Examines current viral research and the struggle to conquer today's epidemics and prevent tomorrow's
A Dancing Matrix Robin Marantz Henig, 1993 Viruses are elusive, intrusive, and inscrutable; hence Henig's description of them as a dancing matrix. Now comes an urgent and startling look at the cutting edge of viral research: the struggle to conquer today's epidemics and prevent tomorrow's using genetic engineering. 7 illustrations

Science, Theology, and Ethics Ted Peters, 2017-03-02 Science challenges faith to seek fuller understanding, and faith challenges science to be socially and ethically responsible. This book begins with faith in God, the Creator of the world, and then expands our understanding of creation in light of Big Bang cosmology and new discoveries in physics. Examining the expanding frontier of genetic research, Ted Peters draws out implications for theological understandings of human nature and human freedom. Issues discussed include methodology in science and theology, eschatology in cosmology and theology, freedom and responsibility in evolution and theology, and genetic determinism, genetic engineering, and cloning in relation to freedom, the commodification of human life, and equitable distribution of the fruits of genetic technology. The dialogue model of relationship between science and religion proposed in this book provides a common ground for the disparate voices among theologians, scientists, and world religions. This common ground has the potential to breathe new life into current debates about the world in which we live, move, and have our being

Justice in the Age of Agnosis James Gacek, Richard Jochelson, 2024-05-18 This book seeks to further the understanding of the human experience of coerced and forced ignorance on social, human rights, and criminal justice-related topics, drawing together scholars from multiple disciplinary fronts. It argues that people in our social world are forced or coerced through either implicatory or interpretive denial that is normalized through specific cultural and social mechanisms by which we refer to this as non-knowledge or agnosis. There has also been a lack of scholarship which examines how human victimization and power intersect by and through the systematic orchestration of forced ignorance and doubt upon daily human life. This book

s focus is an examination of the ways in which people find themselves in social spaces without empirical clarity and understand that absence as satisfaction stability or perhaps even pleasure It discusses a range of topics including for example people s sense of relative safety despite empirical realities suggesting otherwise This book seeks to make visible the role of ignorance in governing society highlighting how the late modern human experience in a post World War II human rights era subsumes subverts and sublimates the complex relationship between knowledge and denial the empirical gulf between knowledge and resistance may indeed breed complicit bliss

Mismanaged Money in American Healthcare Lisa Famiglietti,Mark Scott,2023-08-30 Warren Buffett famously invoked the metaphor of a tapeworm when describing what healthcare is to the American economy The United States spends approximately 20% of its gross national product on healthcare but it is unclear where the money goes or who is minding the store This healthcare crisis is mostly about money not lack of money but rather misspending of money From the perspective of a healthcare auditor and provider this work describes the problems of American healthcare finance and proposes solutions Extensive charts and graphs are used to trace where money goes in the American healthcare system while other topics such as ethics in healthcare billing un-auditable hospital costs and scams are discussed There is evidence that clearly identifies where the money goes and its destination may surprise the reader

Agents of Apocalypse Ken De Bevoise,1995-01-03 As waves of epidemic disease swept the Philippines in the late nineteenth century some colonial physicians began to fear that the indigenous population would be wiped out Many Filipinos interpreted the contagions as a harbinger of the Biblical Apocalypse Though the direct forebodings went unfulfilled Philippine morbidity and mortality rates were the world s highest during the period 1883 1903 In **Agents of Apocalypse** Ken De Bevoise shows that those mourning years resulted from a conjunction of demographic economic technological cultural and political processes that had been building for centuries The story is one of unintended consequences fraught with tragic irony De Bevoise uses the Philippine case study to explore the extent to which humans participate in creating their epidemics Interpreting the archival record with conceptual guidance from the health sciences he sets tropical disease in a historical framework that views people as interacting with rather than acting within their total environment The complexity of cause effect and agency structure relationships is thereby highlighted Readers from fields as diverse as Spanish American and Philippine history medical anthropology colonialism international relations Asian studies and ecology will benefit from De Bevoise s insights into the interdynamics of historical processes that connect humans and their diseases
