## **A Field Of Diamonds:**

*The Earth ...*, 1926      **Diamonds from the Arkhangelsk Province, NW Russia** Victor Garanin, Konstantin Garanin, Galina Kriulina, George Samosorov, 2021-07-19 This book examines and summarizes data on more than 40 000 diamonds from deposits in Russia's diamondiferous Arkhangelsk province The geological data of diamond deposits includes the geological setting ore body morphology and mineral composition Investigation techniques employed include Color Cathode Luminescence Fourier Transform Infrared Spectroscopy Electron Paramagnetic Resonance Raman Spectroscopy and Carbon Isotopy The book provides a full description of the diamond morphology The problems of a potential mantle diamond grade for deposits are considered depending on the physical and chemical conditions involved in the genesis and growth of diamond crystals Further there can be a significant impact on the productivity of bodies and the properties of diamonds during post crystallization metasomatic processes In this book the authors propose a diamond crystallization model for changes in diamond crystals within mantle metasomatic transformations and identify the factors affecting the growth and dissolution of diamonds in the mantle In addition they describe the complex evolution of kimberlite from the mantle up to the Earth's surface All of these factors affect the quality and quantity of diamonds in a particular diamond deposit providing the basis for identifying optimal technological mining processes      *Diamond: Genesis, Mineralogy and Geochemistry* Karen Smit, Steve Shirey, Graham Pearson, Thomas Stachel, Fabrizio Nestola, Thomas Moses, 2023-06-06 Diamond is the record setter in many mineralogical properties such as hardness diffusivity thermal conductivity purity and covalency of bonding Similarly diamond as the premier gemstone of the mantle holds primacy for geological features such as age and depth of origin Diamond was among the first crystalline structures to be solved by X ray diffraction and the first materials measured for their Raman spectrum At more than 80 billion USD in yearly commercial value diamond sets the record for the most traded valuable mineral on the planet Despite its chemical simplicity diamond has been the object of more research effort and had more scientific and popular press pages written about it than any other mineral      **The Mineral Industry, Its Statistics, Technology, and Trade ...** Richard Pennefather Rothwell, Joseph Struthers, David Hale Newland, Edward K. Litvin,2017-05-17 This book presents an overview of recent advances in our understanding of the genesis of diamonds and the associated phases It is divided into three main parts starting with an introduction to the analysis of diamond inclusions to infer the formation processes In turn the second part of the book presents high pressure experimental studies in mantle diamond parental mineral systems with representative multicomponent boundary compositions The experimental syngensis phase diagrams provided reveal the physicochemical mechanisms of diamond nucleation and substantiate the mantle carbonatite concept of the genesis of diamonds and associated phases Lastly the book describes the genetic classification of diamond hosted mineral inclusions and experimentally determined RE mineral parental melt partition coefficients The physicochemical experimental evidence presented shows the driving forces behind the fractional evolution of the mantle magmas and diamond parental melts Given the depth and breadth of its coverage the book offers researchers essential new insights into the ways diamonds and associated minerals and rocks are naturally created
