Das Ultrarote Spektrum:

Lehrbuch Der Experimental-physik Adolph Wüllner, 1899 **Robotic Exploration of the Solar System** Paolo Ulivi, David M. Harland, 2007-12-08 This fascinating book is a must have text for space enthusiasts with an engineering bent It is a detailed history of unmanned missions that have explored our solar system The subject is treated wherever possible from an engineering and scientific standpoint and includes technical descriptions of the spacecraft their mission designs and their instrumentations Scientific results are discussed in depth together with details of mission management The book is fantastically comprehensive covering missions and results from the 1950s right up to the present day Some of the latest missions and their results appear in a popular science book for the first time **Bulletin of the American Mathematical Society** American Mathematical Society, 1930 **International Catalogue of Scientific Literature** , 1907 Recueil des travaux botaniques néerlandais, publié par la Société botanique néerlandaise, ... Nederlandsche Botanische Vereeniging, Leyden, 1930 *International Catalogue of Scientific Literature, 1901-1914* , 1907 Chemische Technologie Der Neuzeit Otto Dammer (1839-1916, ed), 1910 **Between Making And Knowing: Tools In The History Of Materials Research** Joseph D Martin, Cyrus Mody, 2020-06-16 This book is indexed in Chemical Abstracts Service This book offers a comprehensive sketch of the tools used in material research and the rich and diverse stories of how those tools came to be We aim to give readers a sense of what tools materials researchers required in the late 20th century and how those tools were developed and became accessible The book is in a sense a collective biography of the components of what the philosopher of science Ian Hacking calls the instrumentarium of materials research Readers should gain an appreciation of the work materials researchers put into developing and using such tools and of the tremendous variety of such tools They should also gain some insight into the material and hence financial prerequisites for materials research Materials research requires funding for the availability and maintenance of its tools and the category of tools encompasses a broad range of substances apparatus institutions and infrastructure **The Physics of Solids and Fluids** Paul Peter Ewald, Theodor Pöschl, Ludwig Prandtl, 1930 **Wave Optics in Infrared Spectroscopy** Thomas G. Mayerhöfer, 2024-05-23 Wave Optics in Infrared Spectroscopy starts where conventional books about infrared spectroscopy end Whereas the latter are based on the Bouguer Beer Lambert law the cornerstones of this book are wave optics and dispersion theory This gap between both levels of theory is bridged to allow a seamless transition from one to the other Based on these foundations the reader is able to choose which level of theory is adequate for the particular problem at hand Advanced topics like 2D correlation analysis chemometrics and strong coupling are introduced and viewed from a wave optics perspective Spectral mixing rules are also considered to better understand spectra of heterogeneous samples Finally optical anisotropy is examined to allow a better understanding of spectral features due to orientation and orientational averaging This discussion is based on a 4 x 4 matrix formalism which is used not only to simulate and analyze complex materials but also to understand vibrational circular

dichroism from a semi classical point of view Wave Optics in Infrared Spectroscopy is written as a tool to reunite the fragmented field of infrared spectroscopy It will appeal to chemists physicists and chemical optical engineers Assists the reader including those with less physical science backgrounds in using more of the extensive benefits that infrared spectroscopy can provide by making them better aware and informed about the higher level theory Foundations of the book are built on wave optics and dispersion theory versus the Bouguer Beer Lambert law of conventional infrared spectroscopy literature Limits of lower level of theory are explained in detail Provides a thorough introduction to more sophisticated topics with a smooth transition from lower to higher level theory

Selected Papers Igor E. Tamm,2012-12-06 I E Tamm is one of the great figures of 20th century physics and the mentor of the late A D Sakharov Together with I M Frank he received the Nobel Prize in 1958 for the explanation of the Cherenkov effect This book contains a commented selection of his most important contributions to the physical literature and essays on his contemporaries Mandelstam Einstein Landau and Bohr as well as his contributions to Pugwash conferences About a third of the selections originally appeared in Russian and are to our knowledge for the first time now available to Western readers This volume includes a preface by Sir Rudolf Peierls a biography compiled by Tamm s former students V Ya Frenkel and B M Bolotovskii and a complete bibliography
