Zimmermann, 2012-12-06 In this book are reported the main results presented at the Fourth International Workshop on Data Analysis in Astronomy held at the Ettore Majorana Center for Scientific Culture Erice Sicily Italy on April 12 19 1991 The Workshop was preceded by three workshops on the same subject held in Erice in 1984 1986 and 1988 The first workshop Erice 1984 was dominated by presentations of Systems for Data Analysis the main systems proposed were MIDAS AIPS RIAIP and SAIA Methodologies and image analysis topics were also presented with the emphasis on cluster analysis multivariate analysis bootstrap methods time analysis periodicity 2D photometry spectrometry and data compression A general presentation on Parallel Processing was made which encompassed new architectures data structures and languages The second workshop Erice 1986 reviewed the Data Handling Systems planned for large major satellites and ground experiments VLA HST ROSAT COMPASS COMPTTEL Data analysis methods applied to physical interpretation were mainly considered cluster photometry astronomical optical data compression cluster analysis for pulsar light curves coded aperture imaging New parallel and vectorial machines were presented cellular machines PAPIA machine MPP machine vector computers in astronomy Contributions in the field of artificial intelligence and planned applications to astronomy were also considered expert systems artificial intelligence in computer vision

*Astronomical Data Analysis Software and Systems IV* Richard A. Shaw, Harry Edward Payne, Jeffrey John Edward Hayes, 1995

*Astrostatistics* Gutti Jogesh Babu, E.D. Feigelson, 1996-08-01

Modern astronomers encounter a vast range of challenging statistical problems yet few are familiar with the wealth of techniques developed by statisticians Conversely few statisticians deal with the compelling problems confronted in astronomy *Astrostatistics* bridges this gap Authored by a statistician astronomer team it provides professionals and advanced students in both fields with exposure to issues of mutual interest In the first half of the book the authors introduce statisticians to stellar galactic and cosmological astronomy and discuss the complex character of astronomical data For astronomers they introduce the statistical principles of nonparametrics multivariate analysis time series analysis density estimation and resampling methods The second half of the book is organized by statistical topic Each chapter contains examples of problems encountered astronomical research and highlights methodological issues The final chapter explores some controversial issues in astronomy that have a strong statistical component The authors provide an extensive bibliography and references to software for implementing statistical methods The marriage of astronomy and statistics is a natural one and benefits both disciplines Astronomers need the tools and methods of statistics to interpret the vast amount of data they generate and the issues related to astronomical data pose intriguing challenges for statisticians *Astrostatistics* paves the way to improved statistical analysis of astronomical data and provides a common ground for future collaboration between the two fields
