Dawn Of Modern Science

Wilfred Michael Voynich

Dawn Of Modern Science:

Dawn of Modern Science Thomas Goldstein, 1980 Showing how Western man turned from contemplation of the divine universe to a specific reality Goldstein explores the origins of modern science and the relation of rational inquiry to the mystic arts of alchemy and astrology

Dawn Of Modern Science Thomas Goldstein, 1995-03-22 Dawn of Modern Science explores the beginnings of science from the cosmology of ancient Greece to the cataclysmic conflict between the Medieval understanding of nature through spiritual contemplation and the Renaissance's revolutionary efforts to forge an awareness by observing and exploring the physical world The author brings to life such figures as the Ionian exile Pythagoras who developed the mathematical language by which we apprehend the intrinsic order of nature al Khwarizmi court mathematician in the ninth century who developed the Arabic numerals Roger Bacon the Franciscan teacher and thinker who foresaw the machine age with stunning prophetic vision Dominican Albertus Magnus whose studies of plant and animal life made during long travels barefoot across northern Europe laid the foundations of major empirical sciences the aged astronomer and geographer Paolo Toscanelli who measured the path of the sun on a cathedral floor and whose letter to Columbus launched the discovery of the New World Leonardo da Vinci the lonely genius of science and art who personified the Renaissance and its fascination with life itself Across the centuries Goldstein guides the reader through a shining intellectual pageant in a way that is both illuminating and unforgettable

The Dawn of Modern Science William Huse, 1949

137: Jung, Pauli, and the Pursuit of a Scientific Obsession Arthur I. Miller, 2010-05-17 The history is fascinating as are the insights into the personalities of these great thinkers New Scientist Is there a number at the root of the universe A primal number that everything in the world hinges on This question exercised many great minds of the twentieth century among them the groundbreaking physicist Wolfgang Pauli and the famous psychoanalyst Carl Jung Their obsession with the power of certain numbers including 137 which describes the atom's fine structure constant and has great Kabbalistic significance led them to develop an unlikely friendship and to embark on a joint mystical quest reaching deep into medieval alchemy dream interpretation and the Chinese Book of Changes 137 explores the profound intersection of modern science with the occult but above all it is the tale of an extraordinary fruitful friendship between two of the greatest thinkers of our times Originally published in hardcover as Deciphering the Cosmic Number
