Siti Nurleily Marlina, 2013-01-21 Kurzbeschreibung Der Druck des Bevölkerungswachstums auf der indonesischen Insel Java hat zu gravierender Entwaldung und Schädigung von Wäldern geführt so dass nur noch 8,2 Prozent der ursprünglichen Waldfläche in den Jahren 2006/2007 vorhanden waren Der Bevölkerungsdruck lie Javas Waldflächen durch Landumwandlung in Siedlungen und weiter schrumpfen und kleine isolierte Waldstücke an Berggipfeln wie die in den Dieng Mountainsbrig Das in der Provinz Zentral Java gelegene Dieng Mountainskosystem spielt eine wichtige Rolle bei der Bereitstellung einer breiten Palette von Waren und Dienstleistungen insbesondere bei der Versorgung angrenzender Gebiete mit Wasser und beim Erhalt der biologischen Vielfalt Allerdings leiden auch die Bergwälder in den Dieng Mountains in Folge des Bevölkerungsdrucks unter Abholzung Schlechte landwirtschaftliche Anbaumethoden haben zum Auftreten von Pestizidbelastungen zu einem hohen Maß an Erosion Sedimentationen von Seen und Stauseen Erdbeben Schlammlawinen und Überschwemmungen geführt Waldbrände und illegaler Holzeinschlag gefolgt von Landbeanspruchung und Wanderfeldbau führten dazu dass reife Bergwälder durch junge Sekundärvegetation ersetzt wurden Wiederbewaldungen sind zu einem bedeutenden Vegetationstyp rund um das Dieng Plateau geworden und angesichts der gegenwärtigen landwirtschaftlichen Anbaumethoden zeigt der Trend ihres Flächenausmaßes dass sie auch in Zukunft fortbestehen werden Bisher hat man sich wenig mit den Wiederbewaldungen in den Dieng Mountains beschäftigt ihr Wert in Bezug auf die Funktionsweise von Ökosystemen und den Erhalt der biologischen Vielfalt wurde nur unzureichend untersucht Da Bergwälder der Dieng Mountains dafür bekannt sind viele endemische und seltene Tier und Pflanzenarten zu beherbergen ist es wichtig zu verstehen wie Tier und Pflanzenarten in diesem Gebiet den Habitatwandel bewältigen Die vorliegende Forschungsarbeit ist ein Versuch Auswirkungen von Landnutzungsänderungen die durch anthropogene Störungen hervorgerufen wurden auf die lokale Flora und Fauna speziell auf Vogel und Säugetiergemeinschaften zu untersuchen Die Ergebnisse dieser Studie sollen einen Überblick über den gegenwärtigen Zustand des Dieng Mountainskosystems geben und dazu beitragen Informationen für herer Studien zu schließen Diese Untersuchung soll zuständigen Politikern Wissen über den aktuellen Stand der Dieng Mountains bieten Sie soll ihnen ermöglichen ein wirksames Programm mit angemessenen Zielen zu entwickeln und geeignete Maßnahmen zu ergreifen um die ökologischen Bedingungen der Dieng Mountains zu verbessern Unsere Ergebnisse zeigen dass die Entwicklung der Sekundärvegetation der Dieng Mountains stark von der Geschichte ihrer Landnutzung und von den Aufforstungsprogrammen der lokalen Regierung beeinflusst wurde Die Vegetationsstruktur der Wälder und des Buschlandes der Dieng Mountains waren einander ähnlich Sie kennzeichnete die typische einfache Struktur mit einem offenen Kronendach und dichtem Unterholz die in der Regel in einem tropischen Sekundärwald vorgefunden wird Auf Grönland kamen wenige Bäume vor kein Anzeichen der Einwanderung von Bäumen wurde in diesem Lebensraum gefunden trotz seiner unmittelbaren Nähe

he zu nat rlichen Waldst cken Die relativ niedrigen Anteile von Baumverj ngungen in allen Lebensr umen k nnen den in diesen gro en H hen rauen Umgebungsbedingungen den Auswirkungen von Kahlschl gen in der Vergangenheit sowie der Konkurrenz von Kr utern zugeschrieben werden Der Einfluss menschlicher Aktivit ten in diesen Lebensr umen kann auch ein wichtiger Faktor sein der die Erholung der Vegetation verlangsamt Die Auswirkungen der Aufforstungen auf die Gestaltung der Zusammensetzung der Sekund rvegetation zeigten sich in der Dominanz der Baumarten die im Laufe des Programms gepflanzt worden waren die nicht einheimischen Arten *Acacia decurrens* und *Cupressus sempervirens* und die indonesische Bergart *Schima wallichii* Der Pionierstrauch *Melastoma affine* die Gr ser *Imperata cylindrica* und *Isachne globosa* sowie die Ruderalarten *Eupatorium odoratum* *Eupatorium riparium* *Buddleja asiatica* und *Rubus rosaefolius* dominierten die Unterholzvegetation Insbesondere auf Gr nland schien die Dominanz des kleinen Farns *Gleichenia dichotoma* das Wachstum der vorkommenden Grasarten zu unterdr cken was zur Dominanz einer Krautart der *Conyza javanica* ber Pioniergrasarten f hrte Naturverj ngungen einheimischer indonesischer Baumarten wurden in einer relativ kleinen Zahl vorgefunden Verglichen mit hnlichen Studien in anderen Sekund rw ldern wurde in den Dieng Mountains eine wesentlich geringerer Reichtum an Pflanzenarten vor allem an Geh lzarten festgestellt Der Beitrag der Strauch und Krautkategorien mit mehr als 80 Prozent an der gesamten botanischen Artenvielfalt zeigt den Mangel an Baumarten in unserem Forschungsgebiet an Generell waren der Reichtum und die Diversit t an Pflanzenarten im Buschland am h chsten Der niedrigste Pflanzenartenreichtum wurde im Wald gefunden w hrend die geringste Diversit t an Pflanzenarten auf Gr nland verzeichnet wurde Diese Ergebnisse k nnen mit dem Grad von St rungen in jedem Lebensraumtyp zusammenh ngen wobei Buschland auf einem mittleren Niveau liegt Die hnlichkeit der Zusammensetzung der Pflanzenarten war zwischen den Habitaten in jeder Kategorie sehr hoch Dies deutet trotz des Altersunterschiedes zwischen beiden Lebensr umen darauf hin dass Wald und Buschland noch in einem vergleichbaren Sukzessionsstadium waren w hrend sich Gr nland wohl nicht zu Wald entwickeln wird Wegen der anhaltenden Bev lkerungsausbreitung in den Dieng Mountains d rfte das Schicksal der sekund ren Vegetation dieses Gebietes von dem Ausma zuk nftiger St rungen durch den Menschen bestimmt werden V gel wurden in den verschiedenen Lebensr umen der Dieng Mountains in relativ geringen Dichten gefunden Nach fr heren Studien anderer Autoren sind niedrige Vogeldichten h ufig in einer tropischen Landschaft in der landwirtschaftliche Fl chen und Fl chen sekund rer Vegetation gemischt in mosaikartiger Verteilung vorliegen Wald hatte von allen Lebensraumtypen die komplexeste Vegetationsstruktur und er wies die h chste Dichte und die gr te Artenvielfalt von V geln auf Da Vogelabundanz durch die Lebensraumtypen in ihrer Umgebung beeinflusst werden kann die N he der Waldst cke zu den Urwaldresten auf den Berggipfeln positive Auswirkungen auf die Vogelpopulationen im Wald gehabt haben Mit einer hnlichen aber weniger komplexen Vegetationsstruktur und Zusammensetzung als Wald wies das Buschland ein mittleres Niveau der Dichte und der Artendiversit t der Avifauna auf Trotz seines Mangels an mosaikartiger Heterogenit t und des Vorhandenseins von nur einer

kleinen Anzahl Bäume zwischen den Flurstücken hatten landwirtschaftliche Flächen die zweithöchste Vogeldichte. Mögliche Ursachen hierfür sind die Nähe von landwirtschaftlichen Flächen zu städtischen Gebieten und zu Buschland mit seinen Randstrukturen. Holzgerüche diese Faktoren sind dafür bekannt positive Auswirkungen auf die Abundanz und Artendiversität von Vögeln zu haben. Grönland wies die geringste Artenzahl, Artendiversität und Vogeldichte auf. Die gesamte Anzahl der Vogelarten in unserem Untersuchungsgebiet war gering im Vergleich zur Anzahl Vogelarten einer früheren Studie die auch in den Dieng Mountains durchgeführt worden war. Allerdings war die Vogelwelt in unserer Untersuchung sehr heterogen so dass es wahrscheinlich ist dass die tatsächliche Artenzahl deutlich höher als die erfasste war. Die meisten der erfassten Vogelarten haben eine niedrige bis mittlere Abhängigkeit von Wald und können ihre Ansprüche in einer breiten Palette von Lebensräumen decken es wurden nur sechs Vogelarten erfasst die vom Wald abhängig sind. Unsere Ergebnisse deuten darauf hin dass das Dieng Mountains Kosystem in seinem gegenwärtigen Zustand die Lebensraumansprüche von Populationen verschiedener Vogelarten decken kann. Das beruht vor allem auf dem Vorhandensein von Sekundärvegetation die als Ersatzhabitat für waldbahngige Arten fungiert. Allerdings wird das Fortdauern dieses Zustandes hauptsächlich von der zukünftigen Ausweitung der Landwirtschaft abhängen. Eine Ausweitung der Agrarlandschaft wird letztendlich die Abundanz und die Vielfalt von Vögeln in den Dieng Mountains verringern. Lässt man es zu dass sich die Sekundärvegetation zu einer Klimaxgesellschaft entwickelt so wird die Abundanz und Artendiversität von Vögeln zunehmen. Ähnlich positive Wirkungen kann nach unserer Einschätzung zukünftig die bislang im Untersuchungsgebiet noch nicht praktizierte Agroforstwirtschaft entfalten. Letztendlich muss der Zustand des Dieng Mountains Kosystems verbessert werden um seine Eignung als Lebensraum für seine einheimische Vogelwelt sicher zu stellen. Dreizehn kleine bis mittelgroße Säugetierarten wurden in unserem Untersuchungsgebiet mittels direkter Bestandsaufnahmen und Interviews erfasst. Zwei Arten der schwarze Haubenlangur *Trachypithecus auratus* und der Java Leopard *Panthera pardus melas* wurden in der Roten Liste der IUCN als gefährdet bzw. vom Aussterben bedroht eingestuft. Unsere Ergebnisse deuten darauf hin dass die Sekundärvegetation der Dieng Mountains noch einen geeigneten Lebensraum für die Säugetiergemeinschaft aufwies wobei im Wald und im Buschland jeweils ein viel höheres Artenreichtum herrschte als auf Grönland. Der Artenreichtum an Säugetieren war auf Ackerland fast so hoch wie im Wald und im Buschland was bedeutet dass die landwirtschaftlichen Flächen mit ihren angebaute Kulturen Nahrungshabitate für die meisten Säugetierarten in den Dieng Mountains bot. Die Mehrheit der aufgeführten Arten waren Lebensraumgeneralisten und fähig sich an gestörte Umgebungen anzupassen. Hiervon sind zwei Primatenarten ausgenommen der Javaneraffe *Macaca fascicularis* und der schwarze Haubenlangur *Trachypithecus auratus* deren Lebensraum nur auf Wald beschränkt war. Die Ergebnisse der Habitatpräferenzanalysen von vier Arten die direkt erfasst worden waren waren bei drei Arten mangels ausreichender Daten wenig aussagekräftig. Das Wildschwein *Sus scrofa* zeigte eine signifikante Präferenz für Wald und Wiesen es mied Buschland bei der Nahrungssuche. Die Mitglieder der Säugetiergemeinschaft spielen anscheinend

eine wichtige Rolle als Samenverbreiter bei der Erholung der Wälder der Dieng Mountains und wir erhoffen uns dass diese Studie als Grundlage für die Schaffung eines wirksamen Naturschutzplans zur Verbesserung des Dieng Mountains Ökosystems dient Betrachtet man den Trend der menschlichen Bevölkerungsexpansion und die Landnutzungsmuster in den Dieng Mountains mag das Schicksal der Wälder und der Tierwelt in diesem Gebiet vor allem durch die Höhe zukünftiger Störungen durch Menschen bestimmt werden Günstigenfalls kann sich eine wechselseitige Beziehung zwischen Wald und den Menschen die ihn nutzen entwickeln was ein nachhaltiges Management von Wald und Landschaft zur Folge haben könnte Weitere Forschung ist notwendig um die Folgen der landwirtschaftlichen Praktiken in den Dieng Mountains einschließlich der Auswirkungen von Pestiziden und Düngemitteln auf die Wildbestände zu untersuchen

Description The pressure from population growth in Indonesia's Java Island has resulted in grave deforestation and forest degradation leaving only 8.2 percent of forest cover remaining in 2006. 2007 Population pressure continued to shrink Java's forest cover through land conversion into settlement areas and agricultural fields leaving small isolated forest patches situated on mountain tops like the ones found in the Dieng Mountains. Located in Central Java Province Indonesia the Dieng Mountains ecosystem has an important role in providing a wide range of goods and services especially in supplying freshwater to its adjacent areas and maintaining biodiversity. However the montane forests in the Dieng Mountains suffer from degradation caused by population pressure. Poor farming practices have resulted in the occurrence of pesticide pollution a high level of erosion soil sedimentation in lakes and reservoirs landslides and mud floods. Forest fires illegal logging forest looting followed by land encroachment and shifting cultivation have replaced the mature montane forests with young secondary vegetation. Regrowth forests have become the major vegetation type surrounding the Dieng Plateau and with current farming practices the trend of their formation indicates that they will persist into the future. So far little has been done to deal with regrowth forests in the Dieng Mountains and their value in terms of ecosystem functioning and biodiversity preservation has been insufficiently studied. Since the Dieng montane forests are known to harbor many endemic and rare wildlife species it is important to understand how wildlife species in this area cope with habitat change. This research is an attempt to examine the impact of land use change resulting from human-induced disturbances to the local flora and fauna specifically to bird and mammal communities. The results of this research will provide an overview of the present condition of the Dieng Mountains ecosystem and help to fill in the information gaps left by previous studies. This research will provide policymakers with knowledge of the current state of the Dieng Mountains allowing them to develop an effective program with reasonable goals and take appropriate actions in their effort to improve the ecological conditions of the Dieng Mountains. Vegetation data were collected in habitats that represent various ages of second growth vegetation namely woodland shrubland and grassland. A stratified systematic sampling with a random start was used to collect data on various growthforms of plant species. Vegetation parameters i.e. species density dominance diameter class distribution were then calculated. Plant species richness

and diversity and stands similarity were analyzed using SPADE The bird census was carried out in the same locations chosen for vegetation surveys using the point transect distance method with additional data collections in agricultural land The results were then analyzed using the programs DISTANCE 6.0 release 2 for estimating the bird densities and SPADE for estimating bird species richness and diversity Surveys of mammal signs were also carried out in the same locations chosen for vegetation surveys and bird censuses by using a strip transect of 2 m width crisscrossing the habitats in a random direction Mammal species richness and the habitat preference of each species were then analyzed In addition interviews with local people were also conducted to gather supplementary information regarding the mammalian community in the Dieng Mountains Our results show that the development of the secondary vegetation of the Dieng Mountains was highly influenced by its land use history and reforestation programs run by the local government The vegetation structure of woodland and shrubland of the Dieng Mountains were similar characterized with the typical simple structure normally found in a tropical secondary forest an open canopy and dense undergrowth Few trees populated the grassland no sign of tree invasion was found in this habitat despite its close proximity to natural forest patches The relatively low tree regenerations in all the habitats may be attributed to harsh environmental conditions caused by the high altitudinal location and the impact of forest clearings in the past as well as competition with herbs The effect of human activities in those habitats may also be an important factor slowing down the vegetation recovery The impact of reforestations in shaping the floristic composition of the secondary vegetation was seen in the domination of tree species planted during the course of the program the non native species *Acacia decurrens* and *Cupressus sempervirens* and Indonesian mountain species *Schima wallichii* Pioneer shrub species *Melastoma affine* and grass *Imperata cylindrica* and *Isachne globosa* as well as ruderal species *Eupatorium odoratum* *Eupatorium riparium* *Buddleja asiatica* and *Rubus rosaefolius* dominated the undergrowth vegetation Specifically in grassland the small fern *Gleichenia dichotoma* s domination seemed to suppress the growth of coexisting grass species leading to the domination of a herb species *Conyza javanica* over pioneer grass species Native Indonesian tree species were discovered as natural regrowth in a relatively small number Compared with similar studies in other secondary forests the richness of plant species found in the Dieng Mountains was considerably lower especially that of woody plants The contribution of the shrub and herb categories to more than 80 percent of the total species richness indicates the scarcity of tree species in our research area In general plant species richness and diversity were found highest in shrubland The lowest species richness was found in woodland while the lowest plant species diversity was recorded in grassland These results may be related to the level of disturbance in each habitat which shrubland experienced at an intermediate level The similarity of plant species composition among habitats in each category was very high This suggests that woodland and shrubland were still in a comparable stage of succession despite the age difference between both habitats while grassland may not succeed in developing into a forest Considering the trend of population expansion in the Dieng Mountains the fate of the secondary

vegetation in this area may be determined by the level of future interference by humans. In various habitats in the Dieng Mountains, birds were found in relatively low densities. Based on previous studies by other authors, the occurrence of birds in low densities is common in a tropical landscape in which farmland and secondary vegetation are mixed into mosaics. The woodland of the Dieng Mountains, which had the most complex vegetation structure compared with the other habitat types, bore the highest bird density and species diversity. As bird assemblages are influenced by their surrounding habitat types, the bird populations in woodland may have been positively affected by woodland's proximity to the patches of remnant forests on the mountain tops. With a similar yet less complex vegetation structure and composition than woodland, shrubland had an intermediate level of bird density and species diversity. Despite its lack of mosaic heterogeneity and the presence of only a small number of trees between plots, agricultural land placed second in bird density. Possible causes for this include the proximity of agricultural land to urban areas and its adjacency to shrubland, which provided woody edge habitat; these factors are known to have positive effects on bird abundance and diversity. Grassland had the lowest species richness, species diversity, and bird density. The overall bird species diversity in our study area was low compared with the number of bird species listed in a previous study that also took place in the Dieng Mountains in 2001. However, the bird community was highly heterogeneous, making it likely that the actual species richness was considerably higher than the observed one. Most of the bird species encountered have a low to medium dependency on forest and a broad range of habitat suitability; only six forest-dependent species were recorded. Our results suggest that in its current state, the Dieng Mountains ecosystem can still meet the needs of various bird species populations. This is mainly because of the presence of secondary vegetation, which functions as a substitute habitat for forest-dependent species. However, the persistence of this condition will depend mainly on future agricultural expansion. An expanding agricultural landscape will eventually reduce the abundance and diversity of birds in the Dieng Mountains. Allowing the secondary vegetation to develop into a climax community will increase avian abundance and species diversity. Agroforestry, not yet widely practiced in the study area, also has the potential to have similar positive effects on the avifauna. Nevertheless, the condition of the Dieng Mountains ecosystem still needs to be improved to assure its suitability as a habitat for its native avifauna. Thirteen small to medium-sized mammal species were recorded in our study area through direct surveys and interviews. Two species, the Javan langur (*Trachypithecus auratus*) and Javan leopard (*Panthera pardus melas*), were categorized as vulnerable and critically endangered, respectively, under the IUCN Red List. Our results suggest that the second-growth vegetation of the Dieng Mountains still provided a suitable habitat for the mammalian community, with woodland and shrubland each supporting much higher species richness than grassland. The species richness observed in agricultural land was almost as high as that of woodland and shrubland, implying that agricultural land with its cultivated crops provided food and habitat for most mammal species in the Dieng Mountains. The majority of species listed were habitat generalists and capable of adapting to disturbed environments, except for two primate species, the long-tailed

macaque *Macaca fascicularis* and Javan langur whose habitat was confined only to woodland The results of habitat preference analyses of mammal species recorded directly in the field were mostly inconclusive owing to the lack of sufficient data The most meaningful result was with the wild boar *Sus scrofa* which showed a significant preference towards woodland and grassland while avoiding shrubland for foraging With their function as seed dispersers the mammalian community s members play important roles in the Dieng Mountains forest recovery and therefore we expect this study to serve as a basis for establishing an effective conservation plan towards the improvement of the Dieng Mountains ecosystem Considering the trend of human population expansion and land use patterns in the Dieng Mountains the fate of forests and wildlife in this area may mostly be determined by the level of future interference by humans At best a mutual relationship can develop between the forest and humans utilizing it which would give rise to sustainable forest and landscape management Further research is needed to study the consequences of agricultural practices in the Dieng Mountains including the effects of pesticides and fertilizers on wildlife populations

Dawn Of The Morning Introduction

In today's digital age, the availability of Dawn Of The Morning books and manuals for download has revolutionized the way we access information. Gone are the days of physically flipping through pages and carrying heavy textbooks or manuals. With just a few clicks, we can now access a wealth of knowledge from the comfort of our own homes or on the go. This article will explore the advantages of Dawn Of The Morning books and manuals for download, along with some popular platforms that offer these resources. One of the significant advantages of Dawn Of The Morning books and manuals for download is the cost-saving aspect. Traditional books and manuals can be costly, especially if you need to purchase several of them for educational or professional purposes. By accessing Dawn Of The Morning versions, you eliminate the need to spend money on physical copies. This not only saves you money but also reduces the environmental impact associated with book production and transportation. Furthermore, Dawn Of The Morning books and manuals for download are incredibly convenient. With just a computer or smartphone and an internet connection, you can access a vast library of resources on any subject imaginable. Whether you're a student looking for textbooks, a professional seeking industry-specific manuals, or someone interested in self-improvement, these digital resources provide an efficient and accessible means of acquiring knowledge. Moreover, PDF books and manuals offer a range of benefits compared to other digital formats. PDF files are designed to retain their formatting regardless of the device used to open them. This ensures that the content appears exactly as intended by the author, with no loss of formatting or missing graphics. Additionally, PDF files can be easily annotated, bookmarked, and searched for specific terms, making them highly practical for studying or referencing. When it comes to accessing Dawn Of The Morning books and manuals, several platforms offer an extensive collection of resources. One such platform is Project Gutenberg, a nonprofit organization that provides over 60,000 free eBooks. These books are primarily in the public domain, meaning they can be freely distributed and downloaded. Project Gutenberg offers a wide range of classic literature, making it an excellent resource for literature enthusiasts. Another popular platform for Dawn Of The Morning books and manuals is Open Library. Open Library is an initiative of the Internet Archive, a non-profit organization dedicated to digitizing cultural artifacts and making them accessible to the public. Open Library hosts millions of books, including both public domain works and contemporary titles. It also allows users to borrow digital copies of certain books for a limited period, similar to a library lending system. Additionally, many universities and educational institutions have their own digital libraries that provide free access to PDF books and manuals. These libraries often offer academic texts, research papers, and technical manuals, making them invaluable resources for students and researchers. Some notable examples include MIT

OpenCourseWare, which offers free access to course materials from the Massachusetts Institute of Technology, and the Digital Public Library of America, which provides a vast collection of digitized books and historical documents. In conclusion, Dawn Of The Morning books and manuals for download have transformed the way we access information. They provide a cost-effective and convenient means of acquiring knowledge, offering the ability to access a vast library of resources at our fingertips. With platforms like Project Gutenberg, Open Library, and various digital libraries offered by educational institutions, we have access to an ever-expanding collection of books and manuals. Whether for educational, professional, or personal purposes, these digital resources serve as valuable tools for continuous learning and self-improvement. So why not take advantage of the vast world of Dawn Of The Morning books and manuals for download and embark on your journey of knowledge?

FAQs About Dawn Of The Morning Books

How do I know which eBook platform is the best for me? Finding the best eBook platform depends on your reading preferences and device compatibility. Research different platforms, read user reviews, and explore their features before making a choice. Are free eBooks of good quality? Yes, many reputable platforms offer high-quality free eBooks, including classics and public domain works. However, make sure to verify the source to ensure the eBook credibility. Can I read eBooks without an eReader? Absolutely! Most eBook platforms offer web-based readers or mobile apps that allow you to read eBooks on your computer, tablet, or smartphone. How do I avoid digital eye strain while reading eBooks? To prevent digital eye strain, take regular breaks, adjust the font size and background color, and ensure proper lighting while reading eBooks. What the advantage of interactive eBooks? Interactive eBooks incorporate multimedia elements, quizzes, and activities, enhancing the reader engagement and providing a more immersive learning experience. Dawn Of The Morning is one of the best book in our library for free trial. We provide copy of Dawn Of The Morning in digital format, so the resources that you find are reliable. There are also many Ebooks of related with Dawn Of The Morning. Where to download Dawn Of The Morning online for free? Are you looking for Dawn Of The Morning PDF? This is definitely going to save you time and cash in something you should think about.
