Constraint Programming Languages Their Specification And Generation:

Constraint Programming Languages. Their Specification and Generation William Lelel,1988 Handbook of Constraint Programming Francesca Rossi,Peter van Beek,Toby Walsh,2006-08-18 Constraint programming is a powerful paradigm for solving combinatorial search problems that draws on a wide range of techniques from artificial intelligence computer science databases programming languages and operations research Constraint programming is currently applied with success to many domains such as scheduling planning vehicle routing configuration networks and bioinformatics The aim of this handbook is to capture the full breadth and depth of the constraint programming field and to be encyclopedic in its scope and coverage While there are several excellent books on constraint programming such books necessarily focus on the main notions and techniques and cannot cover also extensions applications and languages The handbook gives a reasonably complete coverage of all these lines of work based on constraint programming so that a reader can have a rather precise idea of the whole field and its potential Of course each line of work is dealt with in a survey like style where some details may be neglected in favor of coverage However the extensive bibliography of each chapter will help the interested readers to find suitable sources for the missing details Each chapter of the handbook is intended to be a self contained survey of a topic and is written by one or more authors who are leading researchers in the area The intended audience of the handbook is researchers graduate students higher year undergraduates and practitioners who wish to learn about the state of the art in constraint programming No prior knowledge about the field is necessary to be able to read the chapters and gather useful knowledge Researchers from other fields should find in this handbook an effective way to learn about constraint programming and to possibly use some of the constraint programming concepts and techniques in their work thus providing a means for a fruitful cross fertilization among different research areas The handbook is organized in two parts The first part covers the basic foundations of constraint programming including the history the notion of constraint propagation basic search methods global constraints tractability and computational complexity and important issues in modeling a problem as a constraint problem The second part covers constraint languages and solver several useful extensions to the basic framework such as interval constraints structured domains and distributed CSPs and successful application areas for constraint programming Covers the whole field of constraint programming Survey style chapters Five chapters on applications

Constraint Programming Languages William Leler,1988 Concurrent Constraint Programming Vijay Saraswat,1993 Concurrent Constraint Programming introduces a new and rich class of programming languages based on the notion of computing with partial information or constraints that synthesize and extend work on concurrent logic programming and that offer a promising approach for treating thorny issues in the semantics of concurrent nondeterministic programming languages Saraswat develops an elegant and semantically tractable framework for computing with constraints emphasizing their importance for communication and control in concurrent programming languages He describes the basic paradigm illustrates its structure discusses various augmentations gives a simple implementation of a concrete language and specifies its connections with other formalisms In this framework concurrently executing agents communicate by placing and checking constraints on shared variables in a common store The major form of concurrency control in the system is through the operations of Atomic Tell an agent may instantaneously place constraints only if they are consistent with constraints that have already been placed and Blocking Ask an agent must block when it checks a constraint that is not yet known to hold Other operations at a finer granularity of atomicity are also presented Saraswat introduces and develops the concurrent constraint family of programming languages based on these ideas shows how various constraint systems can naturally realize data structures common in computer science and presents a formal operational semantics for many languages in the concurrent constraint family In addition he provides a concrete realization of the paradigm on a sequential machine by presenting a compiler for the concurrent constraint language Herbrand and demonstrates a number of constraint based concurrent programming techniques that lead to novel presentations of algorithms for many concurrent programming problems Languages for Developing User Interfaces Brad A. Myers,1992-11-02 This book brings together a number of researchers and developers from industry and academia who report on their work It is of interest to language designers and the creators of toolkits UIMSs and other user interface tools Constraint Handling Rules Thom Frühwirth,2009-07-09 The definitive reference on Constraint Handling Rules from the creator of the language **ACM Transactions on Programming Languages and Systems** Association for Computing Machinery,2001 **Object and Constraint Paradigms for Graphics** Edwin H. Blake,1991 **Database and Expert Systems Applications** A Min Tjoa,Isidro Ramos,2012-12-06 The Database and Expert Systems Application DEXA conferences are mainly oriented to establish a state of the art forum on Database and Expert System applications But Practice without Theory has no sense as Leonardo said five centuries ago In this Conference we try a compromise between these two complementary aspects A total of 5 sessions are application oriented ranging from classical applications to more unusual ones in Software Engineering Recent research aspects in Databases such as activity deductivity and or Object Orientation are also present in DEXA 92 as well as the implication of the new data models such as OO Model

Deductive Model etc included in the Modelling sessions Other areas of interest such as Hyper Text and Multimedia application together with the classical field of Information Retrieval are also considered Finally Implementation Aspects are reflected in very concrete fields A total of of nearly 200 papers submitted from all over the world were sent to DEXA 92 Only 90 could be accepted A Poster session has also been established DEXA 90 was held in Vienna Austria DEXA 91 in Berlin Germany and DEXA 92 will take place in Valencia Spain where we are celebrating the discovery of the New World just five centuries ago in Leonardo's age Both the quality of the Conference and the compromise between Practice and Theory are due to the credit of all the DEXA 92 authors

Theories and Methods of Spatio-temporal Reasoning in Geographic Space Andrew U. Frank, Irene Campari, Ubaldo Formentini, 1992 This volume collects the papers presented at the first international conference dedicated to spatial and temporal reasoning in geographic space entitled GIS from space to territory theories and methods of spatio temporal reasoning Within the National Center for Geographic Information and Analysis NCGIA one of the supporters of the conference the importance of spatial and temporal reasoning was recognized several years ago Initial research found that spatial reasoning in geographic or large scale space is different from spatial reasoning in small scale space as usually dealt with in robotics and expert systems Temporal reasoning has attracted interest in the artificial intelligence community The volume also includes two invited papers Do people understand spatial concepts the case of first order primitives by R G Golledge and Temporal databases by R T Snodgrass
