Structural Aspects of Building Conservation Poul Beckmann,Robert Bowles,2012-06-25 This practical guide to the assessment and repair of historic buildings is invaluable for structural engineers architects surveyors and builders working in all aspects of building conservation Taking a practical step by step approach the authors discuss the appraisal of buildings and the differences in structural behaviour between new and existing structures Each stage in the appraisal is explained using examples from the authors own work Each major construction material is assessed in detail with separate sections on masonry concrete timber and the particularly complex issues of iron and steel framed buildings Techniques for testing the ability of a building to continue its existing use or to be converted to a new use are explained **Structural Design in Building Conservation** Dimitris Theodossopoulos,2012-07-26 No building is properly conserved if it is not structurally sound Consequently architects engineers and conservation officers need an adequate grounding in the technology the materials and the historic origins of the building in order to complete a conservation project successfully Structural Design in Building Conservation deals with design issues and technical choices showing how they are integrated with the planning and architectural outcomes in a conservation project It brings together theory with current conservation technology discussing the possibilities of structural details and strategies in architectural expression Case studies are central to this and these are organised around such themes as the addition of roofs requalification of space strengthening and re use of fabric reparation additions completions stiffness adjustments and the correction of past mistakes The reader is encouraged to examine the technical details of these real projects and explore the possible solutions The philosophy of structural interventions is introduced in the context of conservation theories and practices in various European countries The main types of strengthening repairs and interventions are explained using different building types and the structural nature of the main elements to be strengthened linear structures frames plates and shells is explored in detail Case studies included cover a very wide range of historic types and conversions not only monumental masonry structures like neoclassical buildings major temples churches public buildings and museums but also more utilitarian structures like historic mills early reinforced concrete structures and vaulting types This is essential reading for all students of architectural conservation and practicing

Durability of Engineering Structures J Bijen,2003-08-31 Civil engineering failures currently amount to 5 to 10 % of the total investment in new buildings and structures These failures not only represent important cost considerations they also have an environmental burden associated with them Structures often deteriorate because not enough attention is given during the design stage and most standards for structural design do not cover design for service life Designing for durability is often left to the structural

designer or architect who may not have the necessary skills and the result is all too often failure incurring high maintenance and repair costs Knowledge of the long term behaviour of materials building components and structures is the basis for avoiding these failures Durability of engineering structures uses on the design of buildings for service life effective maintenance and repair techniques in order to reduce the likelihood of failure It describes the in situ performance of all the major man made materials used in civil engineering construction metals steel and aluminium concrete and wood In addition some relatively new high performance materials are discussed high performance concrete high performance steel and fibre reinforced polymers FRP Deterioration mechanisms and the measures to counteract these as well as subsequent maintenance and repair techniques are also considered and the latest standards on durability and repair are explained Strategies for durability maintenance and repair including life cycle costing and environmental life cycle assessment methods are discussed Finally practical case studies show how repairs can be made and the best ways of ensuring long term durability This book is aimed at students in civil engineering engineers architects contractors plant managers maintenance managers and inspection engineers Explains the reasons why structures often deteriorate before they should because of poor design Shows how to design structures effectively for service life Considers durability characteristics of standard and high performance construction materials
